1 Introduction

1.1 Overview

This specification will be the standard specification used for the Cboe U.S. Options Opening Process Feed on the Cboe Options (“C1”) Exchange platform.

Cboe customers may use the Cboe U.S. Options Opening Process Feed specification to receive real-time Opening Auction message information including auction updates and execution information.

The Cboe U.S. Options Opening Process Feed cannot be used to enter orders. For Cboe U.S. Options order entry, refer to the Cboe U.S. Options [FIX](#) or [BOE](#) specifications.

A WAN-Shaped version of the Cboe U.S. Options Opening Process Feed is available from both of Cboe’s datacenters. Customers may choose to take one or more of the following feed options depending on their location and connectivity to Cboe.

Exchange	Shaping	Served From Data Center (Primary/Secondary)	Multicast Feed ID
C1 Options	WAN	Primary	CCO
C1 Options	WAN	Primary	CDO
C1 Options	WAN	Secondary	CEO

Cboe customers may also use Cboe U.S. Options Multicast PITCH, Cboe U.S. Options Multicast TOP, and Cboe U.S. Options Auction data feeds to receive opening process messages. Refer to the specifications for the respective feeds for more information.

1.2 Feed Connectivity Requirements

WAN Shaped feeds are available to customers with a minimum of 100 Mbs/s of connectivity to Cboe via cross connect or dedicated circuit.

Customers with sufficient connectivity may choose the WAN-Shaped feeds from any of the Cboe datacenters. It should be noted that feeds from the secondary datacenter will have additional latency for those connected with Cboe in the primary data center due to proximity and business continuity processing.

Cboe U.S. Options Opening Process Feed real-time events are delivered using a single published multicast address for all symbol ranges.

1.3 Gap Request Proxy and Message Retransmission

Recovery of missed data is not available on the Cboe U.S. Options Opening Process Feed as this feed contains only unsequenced messages.

1.4 Spin Servers

A spin is not available on the Cboe U.S. Options Opening Process Feed as this feed contains only unsequenced messages.

2 Protocol

C1 Options customers may receive the Cboe U.S. Options Opening Process Feed protocol over multicast to receive auction update and summary execution information.

2.1 Message Format

Cboe U.S. Options Opening Process Feed protocol messages are delivered unsequenced and may not be retrieved if missed.

All UDP delivered events will be self-contained. Developers can assume that UDP delivered data will not cross frame boundaries and a single Ethernet frame will contain only one Sequenced Unit Header with associated data.

The Cboe U.S. Options Opening Process Feed is comprised of a series of dynamic length un-sequenced messages. Each message begins with *Length* and *Message Type* fields. Cboe reserves the right to add message types and grow the length of any message without notice. Customers should develop their decoders to handle unknown message types and messages beyond the expected length. Messages will only be grown to add additional data to the end of a message.

2.2 Data Types

The following field types are used within the *Sequenced Unit Header* and *PITCH 2.X*.

- **Alphanumeric** fields are left justified ASCII fields and space padded on the right.
- **Binary** fields are unsigned and sized to “Length” bytes and ordered using Little Endian convention (least significant byte first).
- **Binary Long Price** fields are unsigned Little Endian encoded 8 byte binary fields with 4 implied decimal places (denominator = 10,000).
- **Multiplier** fields are unsigned Little Endian encoded 4 byte binary fields with 1 implied decimal place (denominator = 10).
- **Printable ASCII** fields are left justified ASCII fields that are space padded on the right that may include ASCII values in the range of 0x20 – 0x7e.

2.3 Message Framing

Messages will be combined into single UDP frame where possible to decrease message overhead and total bandwidth. The count of messages in a UDP frame will be communicated using the *Sequenced Unit Header*. Framing will be determined by the server for each site. The content of the multicast across feeds (e.g. C/D WAN-Shaped) will be identical, but framing will not be consistent across feeds.

2.4 Sequenced Unit Header

The `Sequenced Unit Header` is used for all Cboe U.S. Options Opening Process Feed messages.

This feed will deliver only unsequenced data using the `Sequenced Unit Header`. Unsequenced headers will have a 0 value for the sequence field and unit field.

Sequenced Unit Header				
Field	Offset	Length	Value/Type	Description
<i>Hdr Length</i>	0	2	Binary	Length of entire block of messages. Includes this header and <i>Hdr Count</i> messages to follow.
<i>Hdr Count</i>	2	1	Binary	Number of messages to follow this header.
<i>Hdr Unit</i>	3	1	Binary	Unit that applies to messages included in this header.
<i>Hdr Sequence</i>	4	4	Binary	Will be zero.
Total Length = 8 bytes				

2.5 Heartbeat Messages

The `Sequenced Unit Header` with a count field set to “0” will be used for heartbeat messages. During trading hours heartbeat messages will be sent if no data has been delivered within 1 second. Heartbeat messages never increment the sequence number.

Outside of trading hours Cboe sends heartbeat messages are sent to help users validate multicast connectivity. Heartbeat messages may not be sent from 12:00 am – 1:00 am ET or during maintenance windows.

3 Cboe U.S. Options Opening Process Feed Messages

3.1 Time

A `Time` message is sent whenever the source time for a unit passes over a second boundary. All subsequent time offset fields for the same unit will use the new `Time` value as the base until another `Time` message is received for the same unit.

Time				
Field Name	Offset	Length	Type/(Value)	Description
<code>Length</code>	0	1	Binary	<code>Length</code> of this message including this field
<code>Message Type</code>	1	1	0x20	Time Message
<code>Time</code>	2	4	Binary	Number of whole seconds from midnight Eastern Time
Total Length = 6 bytes				

3.2 Options Auction Update

`Options Auction Update` messages are used to disseminate price and size information and Composite Market bid and offer prices during Opening and Re-Opening (halt) auctions on the Cboe Options Exchange. `Options Auction Update` messages are sent every five seconds during an opening period provided that one of the field values has changed. When no values have changed, a message is sent once every 60 seconds. Refer to the [Cboe Options Opening Process](#) specification for more information.

The `Options Auction Update` message has the following format:

Options Auction Update				
Field Name	Offset	Length	Type/(Value)	Description
<code>Length</code>	0	1	Binary	<code>Length</code> of this message including this field.
<code>Message Type</code>	1	1	0xD1	Options Auction Update Message
<code>Time offset</code>	2	4	Binary	Nanosecond offset from last unit timestamp.
<code>Symbol</code>	6	8	Printable ASCII	<code>Symbol</code> right padded with spaces.
<code>Auction Type</code>	14	1	Alphanumeric	G = GTH Opening O = RTH Opening H = Halt Re-Opening V = Volatility Opening
<code>Reference Price</code>	15	8	Binary Long Price	Collared VMIM price computed on the queuing book only.
<code>Buy Contracts</code>	23	4	Binary	Cumulative Buy contracts at the <code>Reference Price</code> and above.
<code>Sell Contracts</code>	27	4	Binary	Cumulative Sell contracts at the <code>Reference Price</code> and below.

U.S Options Opening
Process Feed Specification (Version 1.0.7)

<i>Indicative Price</i>	31	8	Binary Long Price	Collared VMIM price computed on the combined queueing book and the continuous book. Equal to <i>Reference Price</i> for options that do not have a GTH trading session.
<i>Auction Only Price</i>	39	8	Binary Long Price	Uncollared VMIM price computed on the queueing book only.
<i>Opening Condition</i>	47	1	Alphanumeric	O = Would open Q = Need quote to open B = Need more buyers S = Need more sellers C = Crossed Composite Market
<i>Composite Market Bid Price</i>	48	8	Binary Long Price	Bid Price of the prevailing Composite Market
<i>Composite Market Offer Price</i>	56	8	Binary Long Price	Offer Price of the prevailing Composite Market.
Total Length = 64 bytes				

3.3 Auction Summary

`Auction Summary` messages are used to disseminate the results of an auction. An Opening or Re-Opening `Auction Summary` message for each symbol is sent at the conclusion of its Opening or Re-Opening auction and represents the Cboe Opening Price.

The `Auction Summary` message has the following format:

Auction Summary				
Field Name	Offset	Length	Type/(Value)	Description
<i>Length</i>	0	1	Binary	Length of this message including this field.
<i>Message Type</i>	1	1	0x96	<code>Auction Summary</code> Message
<i>Time offset</i>	2	4	Binary	Nanosecond offset from last unit timestamp.
<i>Symbol</i>	6	8	Printable ASCII	<i>Symbol</i> right padded with spaces.
<i>Auction Type</i>	14	1	Alphanumeric	G = GTH Opening O = RTH Opening H = Halt Re-Opening V = Volatility Opening
<i>Price</i>	15	8	Binary Long Price	Auction price.
<i>Quantity</i>	23	4	Binary	Cumulative number of contracts executed during the auction.
Total Length = 27 bytes				

3.4 Width Update

The `Width Update` message is used to communicate the opening quote width multiplier. This message will be sent at the beginning of the day for all underlyings and in the event that the exchange decides to change the quote width multiplier on a per underlying basis. For complete details on the opening collars see the [Cboe Opening Process Specification](#).

Width Update				
Field Name	Offset	Length	Type/(Value)	Description
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field.
<i>Message Type</i>	1	1	0xD2	Width Update Message
<i>Time Offset</i>	2	4	Binary	Nanosecond offset from last unit timestamp.
<i>Underlying</i>	6	8	Printable ASCII	Underlying right padded with spaces.
<i>Width Type</i>	14	1	Alphanumeric	R = Regular V = Volatility
<i>Multiplier</i>	15	4	Multiplier	Width multiplier.
Total Length = 19 bytes				

3.5 Symbol Mapping

A `Symbol Mapping` message is used to map the 6 character multicast feed symbol field to an OSI symbol. These messages are sent continuously through the day at variable rates as bandwidth allows.

Symbol Mapping				
Field Name	Offset	Length	Type/(Value)	Description
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field
<i>Message Type</i>	1	1	0x2E	Symbol Mapping Message
<i>Feed Symbol</i>	2	6	Printable ASCII	Symbol right padded with spaces
<i>OSI Symbol</i>	8	21	Printable ASCII	OSI Symbol
<i>Symbol Condition</i>	29	1	Alphanumeric	N = Normal C = Closing Only
<i>Underlying</i>	30	8	Alphanumeric	Underlying right padded with spaces.
Total Length = 38 bytes				

3.6 End of Session

The `End of Session` message is sent for the feed when all the units have shut down. No more auction messages will be delivered for this feed.

End of Session				
Field Name	Offset	Length	Type/(Value)	Description
<i>Length</i>	0	1	Binary	<i>Length</i> of this message including this field
<i>Message Type</i>	1	1	0x2D	End of Session Message

U.S Options Opening
Process Feed Specification (Version 1.0.7)

<i>Timestamp</i>	2	4	Binary	Nanosecond offset from last timestamp
Total Length = 6 bytes				

3.7 SOQ Strike Range Update

The SOQ Strike Range Update message is only available on the C1 Exchange. This message disseminates the minimum and maximum strike prices in the strike price range used to calculate the Special Opening Quote (“SOQ”) on a Volatility Settlement date. In the event that multiple distinct SOQ calculations occur on the same day, the applicable SOQ is differentiated by the *SOQ Identifier* field, which is set to the CSMi symbol on which the final settlement SOQ value is disseminated

The SOQ Strike Range Update message has the following format:

SOQ Strike Range Update				
Field Name	Offset	Length	Type/(Value)	Description
<i>Length</i>	0	1	Binary	Length of this message including this field
<i>Message Type</i>	1	1	0x9D	SOQ Strike Range Update Message
<i>Time offset</i>	2	4	Binary	Nanosecond offset from last unit timestamp
<i>SOQ Identifier</i>	6	20	Printable ASCII	Dissemination symbol of the final SOQ right padded with spaces.
<i>Lower Strike Price</i>	26	8	Binary Long Price	SOQ lower strike price
<i>Upper Strike Price</i>	34	8	Binary Long Price	SOQ upper strike price
Total Length = 42 bytes				

3.8 Constituent Symbol Mapping

The Constituent Symbol Mapping message is only available on the C1 Exchange. This message is used to communicate which options series (if any) are Constituent Series in a Volatility Settlement Special Opening Quote (“SOQ”). The message is identical to the *Symbol Mapping* message with the addition of the *SOQ Identifier* field, which is set to the CSMi symbol on which the final settlement SOQ value is disseminated. The Constituent Symbol Mapping message is sent as an unsequenced message with one message sent for each Constituent Series in a continuous loop as bandwidth allows.

The Constituent Symbol Mapping message has the following format:

Constituent Symbol Mapping				
Field Name	Offset	Length	Type/(Value)	Description
<i>Length</i>	0	1	Binary	Length of this message including this field.
<i>Message Type</i>	1	1	0x9E	Constituent Symbol Mapping Message
<i>Feed Symbol</i>	2	6	Printable ASCII	<i>Symbol</i> right padded with spaces

U.S Options Opening
Process Feed Specification (Version 1.0.7)

<i>OSI Symbol</i>	8	21	Printable ASCII	OSI Symbol
<i>Symbol Condition</i>	29	1	Alphanumeric	N = Normal C = Closing Only
<i>Underlying</i>	30	8	Alphanumeric	Symbol of underlying equity right padded with spaces.
<i>SOQ Identifier</i>	38	20	Printable ASCII	Dissemination symbol of the final SOQ right padded with spaces.
Total Length = 58 bytes				

4 Message Types

0x20	Time
0xD1	Options Auction Update
0x96	Auction Summary
0xD2	Width Update
0x2E	Symbol Mapping
0x2D	End of Session
0x9D	SOQ Strike Range Update
0x9E	Constituent Symbol Mapping

5 Example Messages

Each of the following message types must be wrapped by a sequenced unit header as described in Section 2.4. Note that in the following examples, each byte is represented by two hexadecimal digits.

5.1 Sequenced Unit Header

Hdr Length	31 00	49 bytes, including header
Hdr Count	02	2 messages to follow
Hdr Unit	01	Unit 1
Hdr Sequence	00 00 00 00	Always set to zero

7 Connectivity

7.1 Supported Extranet Carriers

The Cboe U.S. Options Opening Process Feed will be made available to customers through extranet carriers that have completed their multicast implementation and certified with Cboe on a per-market basis. Cboe has certified a number of carriers for redistribution of Cboe Multicast data feeds as outlined in the [Cboe US Equity/Options Connectivity Manual](#). For more information on receiving the Cboe U.S. Options Opening Process Feed through any of these providers, please refer to the vendor contact information noted in the Extranet Providers section of the Connectivity Manual.

7.2 Bandwidth Recommendation

The WAN-shaped feeds require 1Gbps of bandwidth. Cboe will use 90% of these respective bandwidths for Multicast to allow customers to use the same physical connection for FIX order entry if desired.
