

BATS Highlights Equities and Options Exchange BCP/DR Plans

BATS takes pride in the reliability and availability of its systems. Historically, BATS' systems have been up and available more than 99.9% of the time; yet as a precaution, BATS has put extensive time and resources toward planning for system failures, including those that might affect the primary auctions of securities listed on BATS. Redundancies and resiliencies are built into every part of the BATS system, including software, hardware, storage, database, and network components.

To learn more about how BATS approaches BATS Matching Engine Resiliency, Data Center Redundancy (DR), and Business Continuity Planning (BCP) refer to the [BATS Listing Market BCP/DR Plan](http://www.batstrading.com/support/) found at <http://www.batstrading.com/support/>.

Additionally, BATS would like to remind customers that it offers a free logical port at its DR site in Chicago to mirror each logical port assignment (covering both order entry and market data) at the Primary Data Center in Secaucus, NJ. BATS encourages all customers to connect to our DR site in Chicago.

More Information
