EDGX Options and CFE to Populate CumQty on Leg Fills Related to Complex Executions

Overview
Cboe EDGX Options Exchange and Cboe Futures Exchange (“CFE”) are pleased to announce the release of new functionality that will allow for CumQty (FIX Tag 14) to be populated on leg fills related to complex executions. Currently, the CumQty field is zero-filled for all such executions. This change will also be applied to the new C2 Options platform operating on Bats technology which is launching on May 14, 2018, subject to regulatory review.

Technical Details
On the effective dates, BOE and FIX (including FIX-formatted drop) execution messages for leg fills related to a complex execution will have the CumQty (FIX Tag 14) field populated. This will allow customers to track the cumulative quantity that has been executed for each leg of a complex order.

Rollout Schedule

<table>
<thead>
<tr>
<th>Target Date</th>
<th>Milestone</th>
</tr>
</thead>
<tbody>
<tr>
<td>04/10/18</td>
