

# BZX Options, EDGX Options, C2 Options and CFE to Add Optional Mass Cancel ID, Change Length of Binary Protocol Purge Rejected Message

## Overview

BZX Options Exchange, EDGX Options Exchange, C2 Options Exchange and CFE are pleased to announce the addition of *MassCancelId* as an optional bitfield on Binary Order Entry (BOE) *Purge Rejected* messages effective on the dates in the Rollout Schedule below. The *MassCancelId*, if sent, will allow customers to tie a *Purge Rejected* message back to a *Purge Orders* request.

**Important:** The addition of an optional bitfield will change the length of the *Purge Rejected* message in BOE across all four exchanges, **even if the new optional bitfield is not requested on Login.**

## Technical Details

The *NumberOfReturnBitfields* field will be a single byte field added to the end of the *Purge Rejected* message. Full details on the message structure can be found in the Binary Order Entry Specifications below.

Customers utilizing BOE *Purge* functionality on BZX Options, EDGX Options, C2 Options or CFE must be prepared to handle the new *Purge Rejected* message length on the effective dates.

## Rollout Schedule

Target Date	Milestone
05/20/18	New message length effective in CFE Certification
05/21/18	New message length effective in BZX, EDGX and C2 Options Certification
06/29/18	New message length effective in BZX, EDGX, and C2 Options Production
07/01/18	New message length effective in CFE Production
