Important Cboe Options Exchange Migration Update

Reference ID: C2019021401

Overview

Cboe Options Exchange ("C1") is pleased to announce the migration to Bats technology remains on track for October 7, 2019, subject to regulatory review.

In the following sections, important updates are highlighted which relate to:

- Migration Timeline (Updated)
- Feature Packs (Updated)
- Technical Reference Documents (Updated)
- Testing Opportunities and Script
- OCC Testing Opportunities
- OCC Clearing Reference
- Customer Support Contacts
- Trading Floor Updates
- Invoices
- Logical Production Port Billing
- Physical Port Billing (Updated)
- Platform Notifications
- Market Makers
- Platform Contingency/Fallback Plans

Migration Timeline (Updated)

<table>
<thead>
<tr>
<th>Customer Milestone</th>
<th>Target Availability Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Review technical specification for C1 on Bats technology</td>
<td>11/16/18</td>
</tr>
<tr>
<td>Establish physical–network connectivity to new C1 certification, production, and disaster recovery</td>
<td>02/01/19</td>
</tr>
<tr>
<td>Confirm Firm Administrator access to Customer Web Portal</td>
<td>03/04/19</td>
</tr>
<tr>
<td>Order logical sessions for C1 certification</td>
<td>03/04/19</td>
</tr>
</tbody>
</table>
Complete C1 BOE and/or FIX certification | 03/04/19
---|---
Customer call | 03/19/19
Update C1 production order entry and DROP session counts | 04/02/19
Update default C1 production session settings | 04/02/19
Participate in weekday production environment testing using test symbols | 05/06/19
Participate in weekend test opportunity *(Including support for the trading floor.*) | 06/15/19
Completion of C1 migration to Bats technology in NY5 (Go-Live) | 10/7/19

**IMPORTANT:** Good-‘til-canceled (“GTC”) orders existing on the legacy C1 platform at the close on Friday, October 4, 2019, will be cancelled after the close at 4:45PM ET and will need to be resubmitted on the new C1 platform.

**Feature Packs** *(Updated)*

In preparation for the C1 migration, and in an effort to unify our options functionality as much as possible across our four options platforms while further de-risking the migration of C1 to the Bats technology platform, Cboe plans to introduce a total of nine Feature Packs across our BZX Options, C2 Options and/or EDGX Options exchanges, subject to regulatory review and approval. Rollout of the Feature Packs began in the fourth quarter of 2018 and will continue through to the third quarter of 2019.

The first three Feature Pack have been deployed, and Feature Pack 5 has been announced with target implementation dates. Further information regarding the remaining Feature Packs will be communicated in future updates. The Feature Packs have been bundled to focus on functionality as follows:

<table>
<thead>
<tr>
<th>Feature Pack</th>
<th>Target Availability Date <em>(Certification)</em></th>
<th>Target Availability Date <em>(Production)</em></th>
</tr>
</thead>
<tbody>
<tr>
<td>#1 – Entitlements / Reserve Orders</td>

**Testing Opportunities and Script**

The first of five weekend test opportunities is scheduled to take place on June 15, 2019, with the final production readiness weekend test taking place on Saturday, October 5, 2019. Refer to the Migration Timeline for the complete list of test dates.

All symbols supported on the current production trading platform will be made available for test trading during each weekend test. The following market transition states will be supported:

<table>
<thead>
<tr>
<th>Time</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>7:30 AM CT</td>
<td>C1 Options production environment available for connection.</td>
</tr>
<tr>
<td>7:30 AM CT</td>
<td>Pre-open queuing session begins.</td>
</tr>
<tr>
<td>8:00 AM CT</td>
<td>Global Trading Hours (&quot;GTH&quot;) session opens for SPX, VIX, and FLEX products.</td>
</tr>
<tr>
<td>8:30 AM CT</td>
<td>Regular Trading Hours (&quot;RTH&quot;) session opens.</td>
</tr>
<tr>
<td>Noon CT</td>
<td>RTH session closes.</td>
</tr>
</tbody>
</table>

TPHs and ISVs that have certified to the new C1 trading platform will be allowed to connect, submit orders, and receive market data for the duration of the test. The trade date for all transactions on all exchange messaging (e.g. order acknowledgements, execution reports, drop, and market data) during this test will be the actual date (e.g. 06/15/2019).

In order to test any other transitions, including persistence of GTCs, please plan to participate in testing in the production environment using test symbols during a normal weekday any time after Monday, May 6, 2019. A list of support test symbols will be made available on markets.cboe.com once the platform is live with test symbol support. The file will be found by navigating to “Our Markets” > “U.S. Options” > “Market Statistics” > “Product Info” > “All Series (CSV)”.

The Cboe Trade Desk (913.815.7001) and NOC (913.815.7005) will be available for support for the duration of all weekend test opportunities as well as during normal business hours.

**OCC Testing Opportunities**

OCC will be participating with Cboe during the test of the new C1 production trading platform on the weekend test dates noted in the Migration Timeline. Customers will not be able to obtain any real-time clearing records on Saturday during testing from the OCC, but if they wish to obtain DDS records for the Saturday test date activity, they may submit a testing request with OCC (see link below). The test trades will be executed in one of OCC’s external test environments, and DDS test records will have a business date of the Monday following each Saturday test date.

Additionally, please be advised that the C1 certification trading platform will be submitting real-time clearing data to the OCC’s external test environments Monday through Friday from Monday, March 4, 2019, until Friday, October 4, 2019. Firms interested in accessing test clearing records based on C1 certification environment test activity during this time may also submit an OCC testing request.
OCC external testing requests are initiated by completing an online form with the OCC. The form is available on the OCC Website (www.theocc.com) from the ‘Clearing & Services / Certification Testing Services’ menus or directly from the following link:

➢ http://www.theocc.com/clearing/certification-testing/default.jsp

OCC supports a minimum 1-week lead time for all test requests in order to confirm system and resource availability as well as to complete any pre-test verifications.

Submitted test requests will be responded to within two business days of receipt; please be sure to reference C1 Certification Testing. The Technical Certification and Documentation Services group will then initiate the process of confirming the scope, timeline, and needed inputs/outputs for the test, including test connectivity.

**OCC Clearing Reference**

Customer Support Contacts

The Cboe Trade Desk (tradedesk@cboe.com – 913.815.7001) and Cboe Network Operations Center (noc@cboe.com - 913.815.7005) will be the primary points of contact for the new C1 trading platform.

The Cboe Operations Support Center (osc@cboe.com – 866.728.2263) will be the primary point of contact for floor specific support needs (e.g. PAR, Pulse, and the data wall).

Trading Floor Updates

Testing Opportunities

TPHs are highly encouraged to participate in one or more weekend tests defined within the Migration Timeline to ensure readiness for the migration to the new platform. Support will be provided for testing on the Cboe trading floor for each scheduled weekend test.

Invoices

Effective upon platform migration, TPHs will be required to use the Cboe Customer Web Portal for accessing invoices. Invoices will be made available in the same format currently used for BZX, C2, and EDGX Options.

Logical Production Port Billing

Logical order entry sessions (FIX, BOE, and BOE Bulk) will be created for each participant in the new production environment based on logins in use on the legacy C1 platform as of April 1, 2019. Additionally, a single DROP session will be created for each TPH.

Subject to regulatory review, C1 logical port fees for FIX, BOE and Drop ports will be assessed the full month rates for October 2019 for logical ports existing on the new trading platform at any time on October 7, 2019. C1 logical port fees for ports added on or after October 8, 2019 will be pro-rated. Legacy CMI and FIX Logins in use prior to October 7, 2019, on the legacy C1 system will not be billed during the October 2019 billing cycle.

Fees will be assessed for all Order Entry and Drop logical ports automatically created in April 2019 for users on the new trading platform unless they are removed upon request prior to October 7, 2019. In addition, fees for other ports such as Purge, Spin Server, and GRP will be pro-rated beginning October 7, 2019, as these ports can only be used within the new platform.

As part of the transition, firms will longer be charged bandwidth packet fees. Instead, firms may be assessed fees for additional logical ports based upon the average daily orders entered by the firm over a given calendar month. TPHs may subscribe to an “Implied Logical Port Fee” report for
the new C1 trading platform by contacting the Cboe Trade Desk prior to the migration date. This is a daily report with month to date data which estimates what the derived logical port cost would be if the month ended on the day each report is delivered. Effective April 2, 2019, firms may either use the “Logical Ports” tool in the Customer Web Portal or contact the Cboe Trade Desk for the current list of ports configured for their firm.

Physical Port Billing

TPHs that continue to leverage legacy C1 platform physical connections (i.e. that are not directly connected to the latency equalized network) will be billed the current C1 physical port fees for October. If a TPH obtains a new C1 latency equalized physical connection to be used upon the launch of the new system, the TPH will be billed a pro-rated fee for the new physical port.

Equinix Fee Waiver

Cboe Global Markets has obtained a waiver from Equinix for the initial cross connect install fee and the Equinix Monthly Recurring Charges (MRC) for up to six months on new cross connects run to the new Cboe Options Exchange (C1) latency-equalized infrastructure built in preparation for the migration to Bats technology. Cboe TPHs and vendors will need to contact their Equinix representatives directly to ensure they are issued the paperwork necessary to obtain waivers.

Sunset of Legacy C1 Physical Connection Access

Cboe will sunset legacy C1 platform physical connection access to the new C1 platform on January 31, 2020.

Therefore, before January 31, 2020, firms will be required to connect to the latency equalized network through a new physical connection. During the transition month of January 2020, firms will not be charged for legacy C1 platform physical connections. Cboe suggests TPHs using the legacy C1 connectivity work with the Cboe NOC on a migration plan to obtain connection(s) directly into the Cboe latency equalized network infrastructure. Please note that physical connectivity for C1 production cannot be utilized to access any other Cboe exchange platforms at this time.

Platform Notifications

C1 Trade Desk notices are available at http://markets.cboe.com/us/options/notices/ and customers can also request an email subscription to the available distribution lists via tradedesk@cboe.com. Currently, the following categories of Options notifications available for subscription include:

- System Status
- Fee Schedule
- Trade Desk Updates (e.g. feature/function updates)
Market Makers

C1 Options Exchange Market Makers need to work with the Cboe Trade Desk to ensure the qualified person(s) who will be maintaining the firm’s Market Maker list have established their credentials to access the Market Maker tool via our website. Alternatively, the firm’s Web Portal Account Admin can provision users with appropriate access using the “User Management” tools available in the Customer Web Portal.

Additionally Cboe will offer a Market Maker Coverage Report on the new platform which details a firm’s quoting activity in registered symbols. Firms may subscribe by emailing the Trade Desk at tradedesk@cboe.com.

Please remember Cboe requires firms notify our Membership Services department of any changes to the list of approved traders submitted with firm’s application.

Platform Contingency/Fallback Plans

In the unlikely event a systemic issue with the new C1 platform necessitates a fallback to the legacy C1 system on the business day of the migration, please be aware of the following:

1. Cboe will keep customers apprised of the current status and plans via Options System Status Updates. These updates will be posted on the notices page referenced in the previous section and will also be distributed via email to customers subscribed to the System Status distribution list. Any status updates will be provided to the trading floor by the Operations Support Center (“OSC”).
2. Cboe intends to first attempt to address issues encountered on the new system before considering the option to fallback to the legacy system.
3. Customers would not be able to connect to the legacy platform order entry or market data connections until such time as would be announced via a System Status Update.
4. Cboe would provide a time at which customers could reconnect to the legacy system, a time at which orders would be accepted for queuing, and a time which trading would begin.
5. TPHs using FIX would need to reset their FIX inbound and outbound sequence number to 1/1.
6. Customers taking market data would be required to connect to the multicast groups associated with the legacy platform.
7. Technical support for the legacy platform would be available via osc@cboe.com.
8. Customer settings and configurations on the legacy system would be the same as they were when the system shut down on Friday, October 4. They will not be transitioned from the new system to the old system.
9. Any open orders on the new platform would be cancelled (including GTC) and would have to be resubmitted to the legacy system.
10. Market data statistics for the day posted to the public web site may not immediately be complete. Automated reporting regarding trading statistics and real time market data for the day would only disseminate data related to the active platform.
11. Cboe would not reactivate the new C1 platform until the start of a new week which would be announced via a Trade Desk Update.

**More Information**

Please contact the Cboe Trade Desk, Cboe NOC, or your Business Development contact for support or with any questions. Additionally, you may refer to the C1 integration website for more details at [http://batsintegration.cboe.com/c1](http://batsintegration.cboe.com/c1).

We appreciate your business and remain committed to powering your potential with Cboe products, technologies, and solutions.
