

## Update - LeavesQty for Single-Leg Instrument Fills Reported Resulting from Complex Execution Postponed

Reference ID: C2020032003

### Overview (UPDATED)

**Applicable Cboe Exchanges:** Cboe Options, C2 Options, and EDGX Options

**Effective March 25, 2020,** The effective date has been postponed for the Cboe Options ("C1"), C2 Options ("C2"), and EDGX Options ("EDGX") Exchanges updates to the FIX order entry protocol to correctly populate and send the *LeavesQty* (FIX Tag 151) field on single-leg instrument fills that result from a complex instrument execution. The new effective date will be communicated in a future notice.

### Technical Details

On the effective date, Cboe will begin sending the *LeavesQty* (FIX Tag 151) field on single-leg instrument fills that result from a complex instrument execution (when *MultilegReportingType* = 2) in FIX. This value will correctly identify the remaining quantity on the single-leg instrument at the time the fill is reported. Previously, *LeavesQty* was not sent on these fill messages.

### Testing Opportunities

This new functionality is currently available in the C1, C2, and EDGX certification environments.

### Additional Information

Refer to the following technical specification for additional information.
