FT Options Mosaic is a revolutionary, patent-pending options chain visualization interface which empowers you to engage with the markets more quickly and confidently by presenting critical market analytics in an intuitive, summarized manner.

The Advanced Scenario Matrix (ASM) is now available within Mosaic to allow you to quickly input and evaluate multiple positions under varying modeling parameters simultaneously.

**Construct** “scenes” to represent different holdings or modeling parameters within an underlying symbol.

**View** profit/loss and risk analytics simultaneously for each “scene” using customizable scenario parameters.

**Share** your ideas (with comments) with colleagues or customers.

### Advanced Scenario Matrix

**Scenario Editor**
Manage and save multiple Scenario definitions which allow customizable vol, price and time steps. Choose matrix coordinates for use in Slides. Advanced features include time weighting, volatility surface shifts and distinct expiration handling.

**Scene Selector**
Choose the scene and edit the holdings or implied volatility for each contract. Add contracts manually or with the “chat parser.”

**Slide Viewer**
Select scenes and risk metrics to be displayed. Control the model time for each scene individually to see the impact of time on the vol/price slides.

**Charts**
Select which scenes and risk metrics are shown in the chart. Matrix coordinates are displayed on the x-axis and metric value is displayed on the y-axis.

**Share**
Share the entire contents of the ASM with anyone by generating a URL link which can be sent by email or chat. Add comments too.
