# 1 Introduction

## 1.1 Overview

Note that this specification is the standard FIX specification to be used for Cboe BYX Exchange, BZX Exchange, EDGA Exchange and EDGX Exchange platforms within the NY5 data center.

Cboe members use a subset of the FIX 4.2 protocol for order entry and drop copies.

It is assumed that the reader is familiar with the FIX 4.2 protocol as described at <http://www.fixprotocol.org>. This document describes the differences between the Cboe implementation and the FIX 4.2 standard.

## 1.2 Document Format

Blue highlighted sections highlight key differences between the Cboe US Equities Exchanges (BYX Exchange, BZX Exchange, EDGA Exchange, and EDGX Exchange).

## 1.3 Data Types

### 1.3.1 Timestamps

All FIX timestamps are GMT as per the FIX standard. Members are expected to synchronize their clocks with an external time source.

### 1.3.2 Prices

Members should program their systems to allow execution prices to be returned with up to four decimals.

- Order prices below \$1.00 may be priced up to four decimal places.
- Order prices of \$1.00 or more may be priced up to two decimal places.
- Order prices for securities in any of the Tick Size Pilot Program Test Groups must be entered in \$0.05 increments.

Example:

0.0001 to 0.9999	Accepted
1.0010, 1.0001, 12.3456	Rejected – sub-penny not allowed above one dollar (except for Retail Price Improving orders on BYX Exchange).
1.0000, 1.00, 12.3400, 12.34, etc.	Accepted – round penny (extra trailing zeroes are fine).

## 1.4 Hours of Operation

All times noted are Eastern Time zone (ET) based.

Refer to the web site for the [Cboe Holiday schedule](#).

**BZX Exchange supports an opening and closing auction for BZX Exchange listed securities** (refer to the [Cboe US Equities Auction Process specification](#) for more information).

Orders entered prior to the start of the Pre-Market or Regular Trading Session which are accepted will be queued for trading in the session designated by the order. Once trading begins, queued orders will be released to the respective book and crossing orders will be matched by time priority. Refer to the [Cboe Equities Opening/Re-Opening Process](#) for more information.

Orders are rejected if they are received outside the hours Cboe is available for trading or queuing. All orders remaining after the Post Market Session will be cancelled automatically (Execution Reports will be delivered).

### 1.4.1 Trading Sessions

Session	Start Time	End Time
Early Order Acceptance	6:00 AM	7:00 AM
Early Trading Session	7:00 AM	8:00 AM
Pre-Market Trading Session	8:00 AM	9:30 AM
Regular Trading Session	9:30 AM	4:00 PM
Post-Market Session	4:00 PM	8:00 PM

## 2 Protocol

### 2.1 Message Format

FIX messages are ASCII formatted. The member will be provided with a *SenderCompId* and *SenderSubId* that must be sent on every message. The *TargetCompId* for all messages the member sends is based on the destination exchange as follows.

Destination Exchange	TargetCompID
BYX Exchange	BYXX
BZX Exchange	BATS
EDGA Exchange	EDGA
EDGX Exchange	EDGX

All messages the member receives will have the Sender and Target fields swapped.

### 2.2 Sequence Numbers

Sequence numbers, both inbound and outbound, will be reset to 1 each night during the down time.

Messages are processed in sequence order. Behind sequence messages (other than Sequence Reset – Reset) cause immediate logout. Ahead of sequence messages (other than a Resend Request) trigger a message recovery via a Resend Request.

### 2.3 Version Compatibility

Cboe uses the FIX 4.2 session protocol.

### 3 Sessions

The following session messages are supported in both directions:

Message	Type	Comment
Logon	A	Begin session (or resume a broken session).
Heartbeat	0	
Test Request	1	
Resend Request	2	
Reject	3	Malformed message or improper session level handling.
Sequence Reset	4	Both Gap Fill ( <i>GapFillFlag=Y</i> ) and Reset.
Logout	5	Used to gracefully close session.

#### 3.1 Connectivity and Certification

<b>IP Address</b>	Address to connect to.	Supplied by Cboe.
<b>TCP Port</b>	Port to connect to.	Supplied by Cboe.
<b>SenderCompID</b>	Sent in every FIX message to Cboe.	Supplied by Cboe.
<b>SenderSubID</b>	Sent in every FIX message to Cboe.	Supplied by Cboe.
<b>TargetCompID (BZX)</b>	Sent in every FIX message to Cboe.	“BATS”
<b>TargetCompID (BYX)</b>	Sent in every FIX message to Cboe.	“BYXX”
<b>TargetCompID (EDGX)</b>	Sent in every FIX message to Cboe.	“EDGX”
<b>TargetCompID (EDGA)</b>	Sent in every FIX message to Cboe.	“EDGA”
<b>TargetSubID</b>	Sent in every FIX message to Cboe.	“TEST” for test/certification system. “PROD” for production.

For information on connectivity options to Cboe, refer to the [Cboe US Equity/Options Connectivity Manual](#).

All new Members must pass certification before they will be permitted to enter orders in the production marketplace. Certain new order types and options will also require certification before they may be utilized. Contact the Cboe Trade Desk for more information.

### 3.2 Logon

Tag	Field Name	Required	Description
35	<i>MsgType</i>	Y	A
108	<i>HeartbeatInterval</i>	Y	Client Heartbeat Interval (in seconds).

The Logon must be the first message sent by the member after the TCP connection is established. EncryptMethod is ignored (FIX level encryption is not supported).

Cboe will wait one second after a Logon is received to ensure that no Resend Request messages are in flight from the Member. A Heartbeat will be sent to indicate that the one second wait period has ended.

**Members should not send any orders prior to receiving this first Heartbeat from Cboe.**

The IP Address of the member, the *SenderCompld*, *SenderSubId* and *TargetCompld* (defined in table above) and *TargetSubId* (“TEST”/”PROD”) will be validated. If validation fails the connection will be dropped without a Reject (to avoid corrupting the members sequence in the case that the member merely mistakenly connected to the wrong port).

If connection is unexpectedly broken, upon reconnection the member may receive a login reply with a sequence number greater than expected. This means that in-flight messages were missed (likely important Execution Reports). The member should issue a Resend Request to retrieve the missed messages.

Similarly Cboe will issue a Resend Request to the member for messages that it missed. The member may wish to send gap fill messages in place of new orders to avoid re-submission of potentially stale orders.

*HeartbeatInterval* must be specified by the member in the Logon message. This value will be clamped between 5 and 300 seconds and returned in the logon reply message. We recommend using as low a value as the reliability and latency of your connectivity will allow.

### 3.3 Heartbeat

Tag	Field Name	Required	Description
35	<i>MsgType</i>	Y	0
112	<i>TestReqID</i>	N	Required in response to a Test Request.

A Heartbeat message should be sent if the agreed upon *HeartbeatInterval* has elapsed since the last message sent. If any message has been sent during the preceding *HeartbeatInterval* a Heartbeat message need not be sent.

### 3.4 Test Request

Tag	Field Name	Required	Description
35	<i>MsgType</i>	Y	1
112	<i>TestReqID</i>	Y	Auto-generated request ID.

If a *HearbeatInterval* + 1 seconds have elapsed since the last message received, a Test Request should be issued. If another *HearbeatInterval* + 1 seconds elapse without receiving a message the TCP connection should be dropped. This ensures that a broken TCP connection will be detected even if the TCP stack doesn't notice (this has been observed to happen in WAN environments, particularly when a VPN is involved).

### 3.5 Resend Request

Tag	Field Name	Required	Description
35	<i>MsgType</i>	Y	2
7	<i>BeginSeqNo</i>	Y	Auto-generated request ID.
16	<i>EndSeqNo</i>	Y	0 means + infinity

A Resend Request message should be processed even if it is received ahead of sequence. Only after resending the requested range (all marked *PossDup*="Y", including any gap fills) should Resend Request be issued in the opposite direction.

As discussed in the FIX 4.2 specification, it is possible to send an open or closed sequence range in a Resend Request (an open range uses sequence zero as the *EndSeqNo*). Cboe will honor either type of request, but will always issue Resend Requests with a closed sequence range.

### 3.6 Reject

Tag	Field Name	Required	Description
35	<i>MsgType</i>	Y	3
45	<i>RefSeqNum</i>	Y	<i>MsgSeqNum</i> of rejected message.
371	<i>RefTagID</i>	N	
372	<i>RefMsgType</i>	N	
373	<i>SessionRejectReason</i>	N	
58	<i>Text</i>		

Session level rejects are used to indicate violations of the session protocol, or missing (or bogus) fields. These are to be expected during development and certification, while the member is being adapted for Cboe, but should be extremely rare in production. Application layer rejects (like Order Reject and Cancel Reject) are normal.

### 3.7 Sequence Reset

Tag	Field Name	Required	Description
35	<i>MsgType</i>	Y	4
36	<i>NewSeqNo</i>	Y	<i>Next expected sequence number.</i>
123	<i>GapFillFlag</i>	N	Sequence Reset – Gap Fill messages ( <i>GapFillFlag</i> ="Y") must be received in sequence. Any messages (including any Gap Fills) sent in response to a Resend Request should have <i>PossDup</i> ="Y". Sequence Reset – Reset ( <i>GapFillFlag</i> not "Y") is used only as a last resort, and always by human intervention, to allow an otherwise hopelessly confused session to be resumed. In these cases all chance at automatic message recovery are lost.

### 3.8 Logout

Tag	Field Name	Required	Description
35	<i>MsgType</i>	Y	5
58	<i>Text</i>	N	<i>Indicates reason for Logout.</i>

Either side may issue a Logout to gracefully close the session. The side that issues the Logout should process messages normally until it sees the logout reply, and then break the TCP connection. Cboe will typically only request logout after the scheduled end of FIX session.

## 4 FIX Messages

### 4.1 Standard Message Header

Tag	Field Name	Required	Description
8	<i>BeginString</i>	Y	FIX.4.2 Must be first field in message.
9	<i>BodyLength</i>	Y	Length of message following <i>BodyLength</i> field up to and including the delimiter preceding the CheckSum field. Must be second field in message.
35	<i>MsgType</i>	Y	Must be third field in message. 0 = HeartBeat 1 = TestRequest 2 = Resend/Request 3 = Reject 4 = SequenceReset 5 = Logout 8 = ExecutionReport 9 = OrderCancelReject A = Logon D = NewOrderSingle F = OrderCancelRequest G = OrderCancelReplaceRequest UCC = Trade Cancel/Correct
49	<i>SenderCompID</i>	Y	ID of sender: Assigned by Cboe for messages sent to Cboe. ( <i>TargetCompID</i> for messages from Cboe)
50	<i>SenderSubID</i>	Y	Sub ID of sender: Assigned by Cboe for messages sent to Cboe. ( <i>TargetSubID</i> for messages from Cboe)
56	<i>TargetCompID</i>	Y	ID of destination: “BATS” for messages sent to BZX Exchange. “BYXX” for messages sent to BYX Exchange. “EDGX” for messages sent to EDGX Exchange. “EDGA” for messages sent to EDGA Exchange. ( <i>SenderCompID</i> for messages from Cboe)

Cboe US Equities  
FIX Specification (Version 2.8.5)

57	<i>TargetSubID</i>	Y	Sub ID of destination: “TEST” for messages sent to Cboe test/certification system. “PROD” for messages sent to Cboe production system. ( <i>SenderSubID</i> for messages from Cboe)
34	<i>MsgSeqNum</i>	Y	Sequential sequence number for session.
43	<i>PossDupFlag</i>	N	Indicates a message resent from the admin level (has a duplicate sequence number). Default is “N”.
52	<i>SendingTime</i>	Y	GMT date-time that message was sent.
122	<i>OrigSendingTime</i>	N	For messages with <i>PossDupFlag</i> =“Y”, indicates time that message was first sent.
115	<i>OnBehalfOfCompld</i>	N	Identifies end-client on messages <b>to</b> Cboe.  Must be allowed NSCC MPID. Service Bureaus must use. May be used by non-service bureau to specify which clearing arrangement to use if multiple clearing arrangements are configured. Alternatively, non-service bureaus may use 439 instead.
116	<i>OnBehalfOfSubID</i>	N	End-client sub identifier.  Four characters alphanumeric, otherwise not validated. Recorded and returned in <i>DeliverToSubID</i> . Available via FIX Drop.  For <i>RoutStrategy</i> (9400) = CLNK, value is passed through to SDP to further identify the end-client.
128	<i>DeliverToCompld</i>	N	Service Bureau use. Identifies end-client on messages <b>from</b> Cboe. Must be allowed NSCC MPID.
129	<i>DeliverToSubID</i>	N	Returns <i>OnBehalfOfSubID</i> optionally sent by client.

## 4.2 Standard Message Trailer

A standard trailer terminates each message.

Tag	Field Name	Description
10	<i>Checksum</i>	Modulo 256 checksum of all characters in message up to and including the delimiter preceding the <i>Checksum</i> field. Three digits with leading zeroes if necessary.

Cboe US Equities  
FIX Specification (Version 2.8.5)

### 4.3 Cboe Specific Fields

The following FIX fields are specific to Cboe:

Tag	Field Name	Description
7694	<i>ContraCapacity</i>	Refer to definition in the Execution Report Section 4.5.1 for more details.
7928	<i>PreventMemberMatch</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
8020	<i>DisplayRange</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
9303	<i>RoutingInst</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
9350	<i>RoutDeliveryMethod</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
9400	<i>RoutStrategy</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
9479	<i>DisplayIndicator</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
9617	<i>ModifySequence</i>	Refer to definition in the Execution Report Section 4.5.1 for more details.
9618	<i>MaxRemovePct</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
9619	<i>CancelOrigOnReject</i>	Refer to definition in the Order Cancel/Replace Section 4.4.3 for more details.
9620	<i>CorrectedPrice</i>	Refer to definition in the Trade Cancel/Correct Section 4.5.3 for more details.
9622	<i>DiscretionAmount</i>	Refer to definitions in the New Order Single Section 4.4.1 and Execution Report Section 4.5.1 for more details.
9688	<i>OrigCompID</i>	Refer to definition in the Execution Report Section 4.5.1 for more details.
9689	<i>OrigSubID</i>	Refer to definition in the Execution Report Section 4.5.1 for more details.
9690	<i>WorkingPrice</i>	Refer to definition in the Execution Report Section 4.5.1 for more details.
9691	<i>InitialDisplayPrice</i>	Refer to definition in the Execution Report Section 4.5.1 for more details.
9730	<i>TradeLiquidityIndicator</i>	Refer to definitions in the Execution Report Section 4.5.1 and Trade Cancel/Correct Section 4.5.3 for more details.
9732	<i>AttributedQuote</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
9882	<i>FeeCode</i>	Refer to definition in the Execution Report Section 4.5.1 for more details.

Cboe US Equities  
FIX Specification (Version 2.8.5)

7692	<i>RiskReset</i>	Refer to definition in the New Order Single Section 4.4.1 for more details.
7695	<i>MassCancelID</i>	Refer to definition in the Purge Request Section 4.6.1, Purge Acknowledgement Section 4.7.1, and Purge Rejected Section 4.7.2 for more details.
7696	<i>CancelledOrderCount</i>	Refer to definition in the Purge Acknowledgement Section 4.7.1 for more details.
7698	<i>CustomGroupIDCnt</i>	Refer to definition in the Purge Request Section 4.6.1 for more details.
7699	<i>CustomGroupID</i>	Refer to definition in the New Order Single Section 4.4.1 and Purge Request Section 4.6.1 for more details.
7700	<i>MassCancelInst</i>	Refer to definition in the Purge Request Section 4.6.1 for more details.

#### 4.4 Order Protocol – Member to Cboe

##### 4.4.1 New Order Single

Tag	Field Name	Req'd	Description
35	Standard Message Header	Y	<i>MsgType="D"</i>
97	<i>PossResend</i>	N	<p>“N” (default) indicates a new order.  “Y” indicates an application level resend and is not supported. The message will be logged, but effectively ignored.</p> <p>For reasons of economy, Cboe does not track (in primary storage) the <i>ClOrdID</i> values of orders that are no longer live.</p> <p>For reasons of performance, Cboe does not access secondary storage to enforce unique <i>ClOrdID</i> values against orders that are no longer live.</p> <p>Without full duplicate <i>ClOrdID</i> value enforcement, it is not possible to safely implement the full behavior specified in the FIX 4.2 Protocol for <i>PossResend</i> (97) =“Y”.</p>
1	<i>Account</i>	N	<p>Reflected back on Execution Reports associated with this order.</p> <p>16 characters or less</p> <p>Characters in ASCII range 33-126 are allowed.</p> <p>Available via Standard FIX Drop on an opt-in basis at the port level. Available by default on Order by Order FIX Drop.</p>

Cboe US Equities  
FIX Specification (Version 2.8.5)

11	<i>ClOrdId</i>	Y	<p>Day-unique ID chosen by client. 20 characters or less. Characters in ASCII range 33-126 are allowed, except for comma, semicolon, and pipe.</p> <p>For proper OATS handling, <i>ClOrdId</i> must comply with OATS ‘Routed Order ID’ as defined in Appendix A of the ‘OATS Reporting Technical Specifications’.</p> <p>If the <i>ClOrdId</i> matches a live order it will be rejected as duplicate (unless <i>PossResend</i> (97) =”Y”, see above).</p> <p><b>Note: Cboe only enforces the uniqueness of <i>ClOrdID</i> values among currently live orders. However we strongly recommend that you keep your <i>ClOrdID</i> values day unique.</b></p>
376	<i>ComplianceID</i>	N	<p>If sent, replaces <i>ClOrdId</i> with this value in Cboe system. While order handler acks will respond with the standard expected <i>ClOrdId</i>, Drop copies would contain the <i>ComplianceID</i> in the <i>ClOrdId</i> field.</p>
60	<i>TransactTime</i>	Y	<p>Time order initiated/released. Required by FIX 4.2, but not used by Cboe.</p>
55	<i>Symbol</i>	Y	<p>Symbol (upper case)</p> <p><b>Entire Cboe format symbol</b> or symbol root if using CQS or CMS format.</p>
65	<i>SymbolSfx</i>	N	<p><i>SymbolSfx</i>: CQS or CMS suffix if used.</p> <p><b>Do not send <i>SymbolSfx</i> if using Cboe format or if symbol does not have a suffix.</b></p> <p>(Refer to Symbology link in the <b>References</b> chapter.)</p>
54	<i>Side</i>	Y	<p>1 = Buy 2 = Sell 5 = Sell Short (client affirms ability to borrow) 6 = Sell Short Exempt</p>
114	<i>LocateReqd</i>	N	<p>Only processed for Sell Short and Sell Short Exempt.</p> <p>N = <b>(Default)</b> Client affirms ability to borrow or Member is relying on an exception to the Regulation SHO locate requirement. Y = Client does not affirm ability to borrow (results in a reject).</p>
38	<i>OrderQty</i>	Y	<p>Number of shares for order, 1 to 999,999.</p>
111	<i>MaxFloor</i>	N	<p>Portion of <i>OrderQty</i> to display. The balance is reserve.</p>

Cboe US Equities  
FIX Specification (Version 2.8.5)

			<p>0 displays entire quantity (<b>Default</b>).</p> <p>The displayed quantity of each order at a price level is decremented first. When displayed quantity is decremented below one round lot, it is reloaded up to <i>MaxFloor</i> from reserve.</p> <p><b>Ignored</b> if order is hidden or IOC</p>
8020	<i>DisplayRange</i>	N	<p>Used for random replenishment of Reserve Orders. Refer to the <a href="#">Reserve Order section</a> of the Order Types and Feature section for more details.</p>
40	<i>OrdType</i>	Y	<p>1 = Market (Regular Session only) 2 = Limit 3 = Stop 4 = Stop Limit P = Pegged</p> <p>Market implies <i>TimeInForce</i> of DAY. Market DAY orders can post in LULD straddle state or for short sale orders during Reg SHO circuit breakers.</p> <p>Pegged requires <i>ExecInst</i> = L, m, P, Q, R, or M.</p> <p>Pegged orders may not be routable <b>except for Midpoint Pegs on EDGA and BYX where Tag 9400 (<i>RoutStrategy</i>) = RMPT or RMPL.</b></p> <p>Stop/Stop Limit orders must be set to <i>TimeInForce</i> (59) = "R" (Regular Hours Only) or "0" (DAY).</p>
44	<i>Price</i>	N	<p>Limit Price.</p> <p>Required for limit orders. If populated for a market order (<i>OrdType</i> (40) = 1), the order will be accepted and behave like a market order (i.e. <i>Price</i> will be ignored).</p> <p>This field is also used to specify an optional Cap Price for Pegged Orders.</p> <p>Order rejected if priced finer than the minimum trading increment for the stock.</p>
99	<i>StopPx</i>	N	<p>The trigger price for Stop and Stop Limit orders. Required if <i>OrdType</i> (40) is equal to 3 or 4. Stop and Stop Limit orders will only be triggered off Last Sale Eligible trades.</p>
9622	<i>DiscretionAmount</i>	N	<p>Discretion is implicitly added to bid prices and subtracted from offer prices. Order will be displayed at Price but can execute in discretionary range.</p>

Cboe US Equities  
FIX Specification (Version 2.8.5)

			<p>A discretionary order will use the minimum amount of discretion necessary to achieve execution.</p> <p>Zero applies no discretion (Default).</p> <p>Max discretion to apply to Price (non-negative 0.00 to 99.99).</p> <p>Non-zero DiscretionAmount does not mix with IOC. It also does not mix with Post-Only (<i>RoutingInst</i> (9303) = P or Q).</p>
211	<i>PegDifference</i>	N	<p>Signed dollar value up to four decimal places* is added to result of peg calculation when the peg difference is below \$1.00.</p> <p>Signed dollar value up to two decimal places* is added to result of peg calculation when peg difference is above \$1.00.</p> <p>Default is zero.</p> <p>Displayed Primary Peg orders with non-aggressive offset must have <i>TimeInForce</i> (59) = R (Regular Hours Only) or 0 (Day). Day orders must be submitted after 9:30 a.m. ET.</p> <p>May be an aggressive offset for hidden Primary pegs.</p> <p>Must be zero (or not specified) for Midpoint peg or non-pegged orders.</p> <p>*PegDifference is rounded (down for Buy, up for Sell) if the resulting price is above \$1.00 except as noted below.</p> <p><b>BYX Exchange Only:</b></p> <p>If <i>ExtendedExecInst</i> (9416) = "T" (Retail Price Improving order):</p> <ul style="list-style-type: none"> <li>• May be priced in \$0.001 increments.</li> <li>• Must be &gt;= 0 for Buy orders.</li> <li>• Must be &lt;= 0 for Sell orders.</li> </ul>
110	<i>MinQty</i>	N	<p>Minimum fill quantity for non-routable hidden or non-routable IOC orders which only interact with liquidity on the target Cboe Exchange.</p> <p><b>Ignored</b> if Enable True <i>MinQty</i> is set to "No" and the order is not a non-routable hidden or non-routable IOC.</p> <p><b>Order is rejected</b> if Enable True <i>MinQty</i> is set to "Yes" and the order is not a non-routable hidden or non-routable IOC.</p> <p><b>Default</b> is zero. Odd lot and mixed lot quantities allowed.</p>

Cboe US Equities  
FIX Specification (Version 2.8.5)

			<p>When the remaining size on an order is less than the defined <i>MinQty</i>, then <i>MinQty</i> will be automatically set to the remaining size.</p> <p>When Enable True <i>MinQty</i> is set to “No” the minimum <b>total</b> fill size may be made up of several <b>consecutive</b> smaller fills. Setting this port attribute to “Yes” will require every fill to meet the defined <i>MinQty</i>. See ‘Fix Port Attributes’ for details.</p>
47	<i>OrderCapacity</i>	Y	<p>The capacity for the order.</p> <p>A = Agency P = Principal R = Riskless Principal</p>

FIX Specification (Version 2.8.5)

58	Text	N	Free format text string. Limit of 64 characters.
	Standard Message Trailer	Y	

#### 4.4.2 Order Cancel Request

Request to cancel an order.

Tag	Field Name	Req'd	Description
35	Standard Message Header	Y	<i>MsgType="F"</i>
97	<i>PossResend</i>	N	<p>“N” (<b>default</b>) indicates a new cancel.</p> <p>“Y” Indicates an application level unsolicited resend. If <i>ClOrdID</i> has not yet been seen, the cancel is treated as normal. If <i>ClOrdID</i> already exists, the resent cancel is ignored.</p>
11	<i>ClOrdID</i>	Y	<p>Day-unique cancel ID chosen by member. 20 characters or less. Characters in ASCII range 33-126 are allowed, except for comma, semicolon, and pipe.</p> <p>Duplicate order <i>ClOrdIDs</i> will be rejected (or ignored if <i>PossResend="Y"</i>).</p>
41	<i>OrigClOrdID</i>	N	<i>ClOrdID</i> of the order to cancel. <i>OrderID</i> must be sent if <i>ClOrdID</i> is not.
37	<i>OrderID</i>	N	<i>OrderID</i> supplied by Cboe on the order acknowledgement. Optional but recommended for performance. <i>ClOrdID</i> must be sent if <i>OrderID</i> is not.
60	<i>TransactTime</i>	N	Time cancel initiated/released. Required by FIX 4.2 but not used by Cboe.
55	<i>Symbol</i>	N	<b>Ignored</b>
65	<i>SymbolSfx</i>	N	<b>Ignored</b>
54	<i>Side</i>	N	<b>Ignored</b>
38	<i>OrderQty</i>	N	<b>Ignored</b>
	Standard Message Trailer	Y	

#### 4.4.3 Order Cancel/Replace Request

Request to modify an order. Only *Price*, *Side*, *OrderQty*, *StopPx*, *MaxFloor*, and *OrdType* may be adjusted. Modifies will result in a loss of time priority unless the modification involves a decrease in *OrderQty*, a change to *MaxFloor*, a change to *StopPx*, or a change in *Side* from sell long to sell short or vice-versa.

Other fields (including *ExecInst*) **will be ignored**, and the value from the original order will be re-used. In particular note that when a Day-ISO is modified the ISO designation continues to apply to the order.

A change in *MaxFloor* takes effect on the next reserve reload.

Changes in *OrderQty* result in an adjustment of the current order's *OrderQty*. The new *OrderQty* does not directly replace the current order's *LeavesQty*. Rather, a delta is computed from the current *OrderQty* and the replacement *OrderQty*. This delta is then applied to the current *LeavesQty*. If the resulting *LeavesQty* is less than or equal to zero, the order is cancelled. This results in safer behavior when the modification request overlaps partial fills for the current order, leaving the Member in total control of the share exposure of the order.

The *Cancel/Replace* message will only be accepted if the original order can be successfully removed. Requests which cannot be processed will be rejected using the *Cancel Reject* message. The *Cancel Reject* message will provide the *ClOrdID* and *OrigClOrdID* values which were specified on the *Cancel/Replace* message for identification.

A *Cancel/Replace* should not be issued until the ack for the previous *Cancel/Replace* has been received for that order (or the acknowledgement for the first *Cancel/Replace Request*). The FIX handler will reject a new *Cancel/Replace* if it has not seen the prior *Cancel/Replace* message from the Matching Engine.

Tag	Field Name	Req'd	Description
35	Standard Message Header	Y	<i>MsgType</i> ="G"
97	<i>PossResend</i>	N	<p>"Y" Indicates an application level resend. If the <i>ClOrdID</i> does not indicate an already pending <i>Cancel/Replace</i>, the <i>Cancel</i> is treated as normal. If <i>ClOrdID</i> does indicate an already pending <i>Cancel/Replace</i> then the resent <i>Cancel/Replace</i> is ignored.</p> <p>"N" (default) indicates a new <i>Cancel/Replace</i>.</p>
1	<i>Account</i>	N	<b>Ignored</b> – Value preserved from original order.
11	<i>ClOrdId</i>	Y	Day-unique ID chosen by member. 20 characters or less. Characters in ASCII range 33-126 are allowed, except for comma, semicolon, and pipe.

Cboe US Equities  
FIX Specification (Version 2.8.5)

			Duplicate order <i>ClOrdIDs</i> will be rejected <sup>1</sup> (or ignored if <i>PossResend="Y"</i> ).
41	<i>OrigClOrdID</i>	Y	<i>ClOrdID</i> of the order to replace.  In the case of multiple changes to a single order, this will be the <i>ClOrdID</i> of the <b>most recent</b> accepted change.
37	<i>OrderId</i>	N	<i>OrderId</i> supplied by Cboe on the order acknowledgement.  In the case of multiple changes to a single order, this will be the <i>OrderId</i> from the most recent acknowledgement.
60	<i>TransactTime</i>	Y	Time Cancel/Replace initiated/released.
55	<i>Symbol</i>	N	<b>Ignored</b> – value preserved from original order
65	<i>SymbolSfx</i>	N	<b>Ignored</b> – value preserved from original order
54	<i>Side</i>	N	May only be used to change from sell long to sell short or vice-versa.  1 = Buy 2 = Sell 5 = Sell Short (client affirms ability to borrow) 6 = Sell Short Exempt
38	<i>OrderQty</i>	N	Number of shares for order.  This will modify the <i>OrderQty</i> of the current order; it does <b>not</b> directly set the remaining quantity.
40	<i>OrdType</i>	N	1 = Market (Regular Session only) 2 = Limit 3 = Stop 4 = Stop Limit P = Pegged  Defaults to original order if not sent.  May replace Limit with Market and vice versa OR Stop with Stop Limit and vice versa, but otherwise must match original order (or not be sent).
44	<i>Price</i>	N	Limit Price. Order rejected if priced finer than the minimum trading increment for the stock.
18	<i>ExecInst</i>	N	<b>Ignored</b> – value preserved from original order

Cboe US Equities  
FIX Specification (Version 2.8.5)

111	<i>MaxFloor</i>	N	Portion of <i>OrderQty</i> to display. The balance is reserve.  Takes effect on the next reserve order reload or priority losing event.  A value of zero will be ignored. If <i>MaxFloor</i> is to be removed completely, then the order should be cancelled and a new order sent.
99	<i>StopPx</i>	N	
9619	<i>CancelOrigOnReject</i>	N	N = Leave original order alone. Y = Cancel original order if replacement fails (an unsolicited Cancel report will be sent for original order in this case).  Default is configurable per port (N if not configured).
	Standard Message Trailer	Y	

<sup>1</sup> Cancel/Replace messages that merely reduce *OrderQty* may be overlapped if the existing *ClOrdID* is re-used. This is the only case (due to OATS restrictions) where re-use of the existing *ClOrdID* is allowed.

## 4.5 Order Protocol – Cboe to Member

### 4.5.1 Execution Report

This section contains all possible fields that are sent in Execution Reports. Not all fields are sent on each Execution Report. Additional or unexpected FIX fields on all FIX messages should be ignored.

**4.5.1.1 State Change Tracking**

For members that wish to track the state of their routable orders, they may **opt-in** to the following functionality at the port level by contacting the Cboe Trade Desk.

Order acks (150=0), modify acks (150=5) and restatements (150=D with 378=4) will carry *TradeLiquidityIndicator* (9730) as follows:

- A = Zero or more immediate partial remove fills followed by posting.
- R = Zero or more immediate partial remove fills followed by a cancel (or full fill).
- X = Zero or more immediate partial remove fills followed by routing.

When an order returns from the router, a restatement will be generated with FIX Tags:

- 150 = D (Restated)
- 378 = 4 (State Change)
- 58 = A (Admin)
- 9730 = A, X or R (as defined in 4.5.1)
- Order details to match the order (*OrdQty, Price, etc.*)
- Cumulative execution details to match the current status (*CumQty, LeavesQty, etc.*)
- Current execution details zeroed (*LastPx, LastShares, etc.*)

**4.5.2 Cancel Reject**

Rejects a Cancel or Cancel/Replace request.

**When a Cancel/Replace is rejected, by default the original order is left alive. A Cancel Reject should not be used as a sign that the original order has been cancelled. Even if the *CancelOrigOnReject* = Y option is being used a separate “unsolicited” cancel will be sent to close out the original order.**

Tag	Field Name	Req'd	Description
35	Standard Message Header	Y	<i>MsgType="9"</i>
11	<i>ClOrdID</i>	Y	<i>ClOrdID</i> from the Cancel or Cancel/Replace request.

Cboe US Equities

60	<i>TransactTime</i>	Y	GMT date-time of cancel/correct.
	Standard Msg Trailer	Y	

#### 4.6 Purge Port Protocol – Member to Cboe

A Purge Port may be created using either the FIX or BOE protocol. For BOE Purge Port messaging please refer to the [Cboe US Equities BOE Specification](#).

##### 4.6.1 Purge Request

Request to cancel a group of orders across all of the firm’s sessions. A Purge Request is accepted only on dedicated FIX Purge Ports.

A firm may choose to implement one or more filters:

1. MPID Filter – optionally cancel based on MPID. This is required for any self-imposed lockouts or for service bureaus. Set using first character of *MassCancelInst* (7700) and sending *OnBehalfOfCompld* (115).
2. *Symbol* Filter – optionally cancel based on symbol. Set by sending a valid symbol in the *Symbol* (55) and *Symbolsfx* (65) fields. Cannot be combined with *CustomGroupID* filter.

Cboe US Equities  
FIX Specification (Version 2.8.5)

3. *CustomGroupID* Filter – optionally cancel based on *CustomGroupID* (7699). A maximum of 10 *CustomGroupIDs* may be included on a single *Purge Request* message. Set by populating *CustomGroupIDCnt* (7698) to a non-zero value. Cannot be combined with *Symbol* filter.

A firm may use the second character of *MassCancelInst* (7700) to set the acknowledgement style. If a single *Purge Acknowledgement* is selected, then *MassCancelID* (7695) must be sent.

A firm may also impose a lockout using the third character of *MassCancelInst* (7700), which cancels any open orders and causes inbound orders received after the lockout to be rejected. A self-imposed lockout requires an MPID (115) to be sent. The firm may also choose to lockout by *Symbol* or *CustomGroupID* (7698) but not by both in the same message.

The system limits the rate at which identical *Purge Request* messages can be submitted to the system. Requests are restricted to twenty (20) messages per second per port.

An identical purge message is defined as a message having all of the same *CustomGroupID* (7699), *Symbol* (55), *SymbolSfx* (65), *OnBehalfOfCompld* (115), and Lockout Instruction field values, as a previously received message.

Tag	Field Name	Req'd	Description
35	Standard Message Header	Y	<i>MsgType</i> ="F"
97	<i>PossResend</i>	N	Y = Indicates an application level unsolicited resend. If <i>ClOrdID</i> has not yet been seen, the cancel is treated as normal. If <i>ClOrdID</i> already exists, the resent cancel is ignored. N = (Default) indicates a new cancel.
60	<i>TransactTime</i>	Y	Time cancel initiated/released. Required by FIX 4.2 but not used by Cboe.
7700	<i>MassCancelInst</i>	Y	At least one character must be provided (MPID Filter). Contiguous characters must be specified up to total length. Truncated (unspecified) characters will default to values indicated below.  <b>1st Character : MPID Filter</b> A = No filtering by MPID is performed. F = All orders that were sent under the MPID specified in <i>OnBehalfOfCompld</i> (115) will be cancelled.  <b>2nd Character : Acknowledgement Style</b> M = (Default) Individual Execution Reports are sent for each cancelled order. S = Single <i>Purge Acknowledgement</i> sent once all cancels have been processed. Single

Cboe US Equities  
FIX Specification (Version 2.8.5)

			<p>Purge Acknowledgement will contain <i>MassCancelld</i> (7695) and <i>CancelledOrderCount</i> (7696). <i>MassCancelld</i> (7695) must be specified or the Purge Request will be rejected.</p> <p><b>B</b> = Both individual Execution Reports and single Purge Acknowledgement. Also requires <i>MassCancelld</i> (7695) to be specified or the Purge Request will be rejected.</p> <p><b>3rd Character : Lockout Instruction</b></p> <p><b>N</b> = (Default) No lockout</p> <p><b>L</b> = Lockout until corresponding Risk Reset received. Lockout can be used only with MPID Filter set to "F", otherwise the Purge Request will be rejected. Lockout will apply to all new orders and cancel/replace orders for the MPID (and symbol or <i>CustomGroupID</i> (7699), if specified).</p> <p>A self-imposed lockout can be released using the <i>RiskReset</i> (7692) field of the New Order Single message.</p>	
7695	<i>MassCancelID</i>	N	Mass Cancel ID – This field will be echoed back in the resulting Purge Acknowledgement when second character of <i>MassCancelInst</i> (7700) is set to "S" or "B". Purge requests containing a <i>MassCancelID</i> that is currently outstanding will be rejected.	
55	<i>Symbol</i>	N	Symbol (upper case). Limits cancellations to only orders with the specified symbol.	
65	<i>SymbolSfx</i>	N	SymbolSfx: CQS or CMS suffix if used.  <b>Do not send <i>SymbolSfx</i> if using Cboe format or if symbol does not have a suffix.</b>  (Refer to Symbology link in the <b>References</b> chapter.)	
7698 Repeating Group	<i>CustomGroupIDCnt</i>	N	Number of repeating <i>CustomGroupIDs</i> (7699) included in this message.  Integer 0-10	
→	7699	<i>CustomGroupID</i>	N	<i>CustomGroupID</i> (7699) to cancel. Only present if <i>CustomGroupIDCnt</i> (7698) is non-zero. Number of repeating groups must match number specified in <i>CustomGroupIDCnt</i> (7698).
	Standard Message Trailer	Y		

## 4.7 Purge Port Protocol – Cboe to Member

### 4.7.1 Purge Acknowledgement

A response to a `Purge Request` will only be sent when the `MassCancelID` (7695) is populated on a `Purge Request`. This includes cases where the Acknowledgement Style of `MassCancelInst` is “S” or “B”.

Tag	Field Name	Description
35	Standard Message Header	<i>MsgType</i> ="8"
52	<i>SendingTime</i>	GMT date-time that execution report was sent by Cboe.
20	<i>ExecTransType</i>	3 = Status
150	<i>ExecType</i>	Reason for this execution report: M = Mass Cancel Complete
7695	<i>MassCancelID</i>	Copied from original <code>Purge Request</code> .
7696	<i>CancelledOrderCount</i>	Number of orders cancelled from a <code>Purge Request</code> with the specified <code>MassCancelID</code> .

### 4.7.2 Purge Reject

Rejects a `Purge Request`.

Tag	Field Name	Description
35	Standard Message Header	<i>MsgType</i> ="9"
39	<i>OrdStatus</i>	8 = Rejected
434	<i>CxlRejResponseTo</i>	1 = Cancel
102	<i>CxlRejReason</i>	2 = Broker Option
58	<i>Text</i>	Free form text message with additional reject information.

## 5 Order Types and Features

The following provides clarifying information that will enable Members to successfully enter orders on a Cboe US Equity Exchange.

This is not meant to be an exhaustive list of all FIX tags that accompany that order type, but an effort to identify the key tags and provide more information regarding certain order types and features. Please refer to the New Order section above for field description details.

### 5.1 Regular Order

Tag	Field Name	Req'd	Comments

9350	<i>RoutDeliveryMethod</i>	N	-
9400	<i>RoutStrategy</i>	N	-

## 5.2 Reserve Order

Reserve orders are orders having both a displayed quantity and a non-visible, reserve quantity that is replenished when the displayed quantity is fully executed.

Users may specify the precise amount of the order to be replenished once the displayed size is fully executed.

### 5.2.1 Random Replenishment

Alternatively, Members may elect a Random Replenishment option by supplying *DisplayRange* on the order. Random Replenishment establishes a range of possible values for the shares that are to be displayed. For example, if *MaxFloor* = 2000 and the *DisplayRange* = 200, the displayed quantity will be selected randomly from any of the following values: 1800, 1900, 2000, 2100 and 2200. Note the value specified must be less than the value specified for *MaxFloor*.

Tag	Field Name	Req'd	Comments

9350	<i>RoutDeliveryMethod</i>	N	-
9400	<i>RoutStrategy</i>	N	-

### 5.3 Discretionary Order

Discretionary Orders are orders that have both a displayed or non-displayed ranked price and an additional non-displayed (discretionary) price. The discretionary order provides a range of prices at which the owner is willing to trade should an opportunity present itself. The display price determines the order's ranking within the order book.

Tag	Field Name	Req'd	Comments
54	<i>Side</i>	Y	-
38	<i>OrderQty</i>	Y	-
40	<i>OrdType</i>	Y	2 = Limit
44	<i>Price</i>	Y	-
9622	<i>DiscretionAmount</i>	Y	-
59	<i>TimeInForce</i>	N	-
9479	<i>DisplayIndicator</i>	N	A Hidden Discretionary order will be ranked and hidden at its limit price but can be executed within a specified discretionary price range if necessary.
9303	<i>RoutingInst</i>	N	-
9350	<i>RoutDeliveryMethod</i>	N	-
9400	<i>RoutStrategy</i>	N	-

- A discretionary order always uses the minimum amount of discretion necessary to execute against an incoming order.
- An inbound “Post Only” order may execute against a discretionary order at its displayed and/or ranked price. In such instance, unless the “Post Only” order removes on entry pursuant to Exchange rules, the incoming Post Only order will be treated as the liquidity provider and the resting order will be treated as the liquidity remover (BYX, BZX, and EDGX Only). Any other incoming order that executes at the displayed and/or ranked price of a resting order will be treated as the liquidity remover and the resting order as the liquidity adder.
- An order with a time-in-force of IOC or FOK that executes against a discretionary order, either at the displayed and/or ranked price of the discretionary order or in the discretionary range of the discretionary order will be treated as the liquidity remover and the resting discretionary order as the liquidity adder.
- An order with a Time-In-Force other than IOC or FOK that executes against a discretionary order in the discretionary range of the discretionary order (but not at its displayed and/or ranked price) will be momentarily placed on the book and treated as the liquidity adder; the resting discretionary order will lift off the book to execute against such order and will be treated as the liquidity remover. (BYX, BZX, and EDGX Only)

- Refer to target [Exchange Fee Schedule](#) for respective liquidity remover and adder fees and rebates.

## 5.4 Peg Order

Cboe supports five types of Peg Orders: Primary Pegs, Market Pegs, Midpoint Pegs, Market Maker Pegs, and Supplemental Pegs. Peg Orders are not eligible for routing to other market center, except for Midpoint Pegs where *RoutStrategy* (9400) =RMPT or RMPL.

Peg orders are prioritized behind non-pegged orders at each price and display level. With regard to hidden peg orders, regular peg orders (*ExecInst* R and P) have a higher priority than Midpoint peg orders ranked at the same price.

When discretion is used on a pegged order, the *DiscretionAmount* always is applied to the current Pegged price.

A resting peg order may remove liquidity when re-priced by an NBBO movement.

### 5.4.1 Midpoint Peg Order

- A non-displayed order that is pegged to the midpoint of the NBBO.
- *ExecInst* = M, m, and L.
- Implicitly hidden, regardless of what is sent in *DisplayIndicator*.
- May execute at a half-penny price increment above \$1.00.
- Will not execute during crossed NBBO.
- May not use *PegDifference*.

### 5.4.2 Primary Peg Order

- An order whose price tracks the same side of the NBBO (i.e. buy orders track the bid).
- *ExecInst* = R
- If not sent, *DisplayIndicator* = "I" will be implied.
- Can be sent as displayed by setting *DisplayIndicator* = "v".
- Will be temporarily clipped to the less aggressive side of the NBBO during crossed NBBO.

### 5.4.3 Market Peg Order

- Pegged to the opposite side of the market of the NBBO (i.e. buy orders track the offer).
- *ExecInst* = P
- If not sent, *DisplayIndicator* = "I" will be implied.
- Will be rejected if *DisplayIndicator* = "v".
- Will be temporarily clipped to the less aggressive side of the NBBO during crossed NBBO.

### 5.4.4 Market Maker Peg Order

- Will price the order at the Designated Percentage away from the same side of the market that is required for Market Makers to meet the minimum quoting obligations in the security. Refer to the [Cboe Market Maker Specification](#) for complete details.
- *ExecInst* = Q, *OrdType* = P
- Must be Post Only, *RoutingInst* = P.

Cboe US Equities  
FIX Specification (Version 2.8.5)

- Must be visible, *DisplayIndicator* = V.
- May not use *PegDifference*.
- If not sent, *DisplayIndicator* will use the default setting defined on the port; orders with *DisplayIndicator* = "I" will be rejected.
- Will only function with securities in which firm is a Registered Market Maker.

#### 5.4.5 Supplemental Peg Order

- Pegged to the same side of the market of the NBBO (i.e. buy orders track the bid). Executable against routable orders that are equal to or less than the aggregate size of the Supplemental Peg Order interest available at that price.
- *ExecInst* = U, *OrdType* = P
- Must be Post Only, *RoutingInst* = P.
- Will be rejected if not sent with *DisplayIndicator* = "I".
- Will be rejected if not sent with a valid *Price*.

Tag	Field Name	Req'd	Comments
18	<i>ExecInst</i>	Y	U = Supplemental Peg
54	<i>Side</i>	Y	-
38	<i>OrderQty</i>	Y	-
40	<i>OrdType</i>	Y	P = Peg

211	<i>PegDifference</i>	N	-
9479	<i>DisplayIndicator</i>	Y	I = Invisible
9303	<i>RoutingInst</i>	Y	P = Post Only

## 5.5 Pegged Discretionary Order

A Pegged Discretionary order is an order whose price is pegged to the NBBO price. It also has a discretionary price component.

Tag	Field Name	Req'd	Comments
18	<i>ExecInst</i>	Y	R = Primary Peg
54	<i>Side</i>	Y	-
38	<i>OrderQty</i>	Y	-
40	<i>OrdType</i>	Y	P = Peg
44	<i>Price</i>	N	Optional Cap Price

211	<i>PegDifference</i>	N	-
9479	<i>DisplayIndicator</i>	N	v = Visible
9303	<i>RoutingInst</i>	N	B = Book Only

## 5.6 Midpoint Discretionary Order (EDGA and EDGX Only)

A Midpoint Discretionary Order is a visible or hidden peg order whose price is pegged to the NBB (NBO) for buys (sells) with discretion that automatically extends to the midpoint of the NBBO.

Tag	Field Name	Req'd	Comments
18	<i>ExecInst</i>	Y	d = Midpoint Discretionary Order
54	<i>Side</i>	Y	-
38	<i>OrderQty</i>	Y	-

59	<i>TimeInForce</i>	N	-
9479	<i>DisplayIndicator</i>	Y	v = Visible I = Invisible
9303	<i>RoutingInst</i>	Y	B = Book Only (EDGA) P = Post Only (EDGX)

## 5.7 Stop Order

All Stop orders at Cboe will be triggered off of the Last Sale price of the specified security.

**Stop:** A Stop order is an order that will be held away from the order book until its specified trigger price (stop price) is reached. Once the trigger price is reached, the order will be elected (activated). Election results in a Market order sent to the book.

**Stop Limit:** A Stop Limit order is an order with both a specified limit price and a trigger price. This order is also held outside of the order book until the stop price is reached. Once the trigger price is reached, it will be elected. The activated order is sent to the order book as a limit order at the specified limit price.

## 5.8 Intermarket Sweep Order (ISO)

An Intermarket Sweep Order is an order type introduced in conjunction with Regulation NMS. This order type allows the receiving exchange to immediately execute an order against any resting orders without checking other Market Centers for better prices. It conveys that the broker has taken responsibility for sending orders directly to Market Centers to access their better-priced, posted quotes.

Tag	Field Name	Req'd	Comments
18	<i>ExecInst</i>	Y	f = Intermarket Sweep Order (Directed or Cboe)
54	<i>Side</i>	Y	-
38	<i>OrderQty</i>	Y	-
40	<i>OrdType</i>	Y	2 = Limit

Cboe US Equities  
FIX Specification (Version 2.8.5)

44	<i>Price</i>	Y	
59	<i>TimeInForce</i>	Y	0 = Day 3 = IOC
9303	<i>RoutingInst</i>	N	-

### 5.9 Re-Priced Orders

Under Regulation NMS, exchanges must avoid posting orders that intentionally lock or cross other protected market center quotes. To comply with this provision of the rule, Cboe offers five alternatives for non-routable orders:

- **Price Adjust** – If at the time of entry an order locks or crosses an away market quotation, the order will be displayed and ranked one penny away from the locking price. If market conditions allow the order to be displayed at the original locking price, it will be moved to that price.
- **Multiple Price Adjust** – If at the time of entry an order locks or crosses an away market quotation, the order will be displayed and ranked one penny away from the locking price. Allow for Multiple Price Adjust orders to continue to have their displayed and ranked price adjusted towards their original limit prices based on changes to the prevailing NBBO.
- **Display Price Sliding** – Permanently adjusts the booked price on entry to the strongest price that does not **cross** the NBBO. It will temporarily adjust the displayed price to the strongest price that does not **lock** the NBBO. When the NBBO widens, the display price will be readjusted to the booked price. The display price may be temporarily weaker than the booked price.
- **Multiple Display Price Sliding** – Does not permanently adjust the booked price on entry, but allows for Display-Price slid orders to continue to have their display **and** booked prices adjusted towards their original limit price based on changes to the prevailing NBBO.
- **Cancel Back** – If at the time of entry an order locks or crosses an away market quotation, the order will be immediately canceled back to the member.

Tag	Field Name	Comments
9479	<i>DisplayIndicator</i>	<b>Re-pricing Options:</b> V = Default. As determined by port level setting (defaults to S) P = Price Adjust m = Multiple Price Adjust R = Cancel back the order if it cannot be booked and displayed without adjustment r = Hidden; cancel back the order if it cannot be booked without adjustment S = Display Price Sliding (this is to override an opt-out of Display Price Siding at the port level) L = Display Price Sliding, but reject if order crosses the NBBO on entry M = Multiple Display Price Sliding

### 5.10 Re-Route Orders

Re-route is designed to aggressively re-route and fill orders. Orders come off the Cboe order book and target a locking or crossing quote at another market center, matching or improving upon the limit price of the re-route eligible order. This behavior occurs anytime Cboe receives an updated quote from another market that locks OR crosses the order resting on the Cboe order book. Re-route is also implicated with certain orders received by the Exchange, as described below. Re-routing may continue until the order is completely filled.

Cboe allows for Re-Route on a cross only when *RoutingInst* (9303) = “X” (Aggressive mode). For Re-Route to function in the event of a locking OR crossing quotation, use *RoutingInst* (9303) = “S” (Super Aggressive mode). Cboe allows for odd lots to be treated as Super Aggressive when *RoutingInst* (FIX Tag 9303) = “K”. Any routable hidden order that is crossed by another market will be routed to such market.

Re-route behavior also occurs anytime Cboe receives an inbound, **displayed Post Only**” order priced at the locking price of an eligible Super Aggressive order (provided such Super Aggressive order is resting at the top of the order queue at such price). In such instance, unless the “Post Only” order removes on entry pursuant to Exchange rules, the incoming Post Only order will be treated as the liquidity provider and the resting order will be treated as the liquidity remover. Refer to target for respective liquidity remover and adder fees and rebates.

### 5.11 Auction Only Orders (BZX Only)

For more information on the following Auction Only Orders, please refer to the [Cboe US Equities Auction Process specification](#).

Order Type	FIX	
<b>Market-On-Open (MOO)</b>	<i>OrdType</i> (40) = 1 ( <i>Market</i> )	<i>TimInForce</i> (59) = 2 ( <i>At the open</i> )
<b>Market-On-Close (MOC)</b>		<i>TimInForce</i> (59) = 7 ( <i>At the close</i> )
<b>Limit-On-Open (LOO)</b>	<i>OrdType</i> (40) = 2 ( <i>Limit</i> ) <i>Price</i> (44) = [price]	<i>TimInForce</i> (59) = 2 ( <i>At the open</i> )
<b>Limit-On-Close (LOC)</b>		<i>TimInForce</i> (59) = 7 ( <i>At the close</i> )
<b>Late-Limit-On-Open (LLOO)</b>		<i>TimInForce</i> (59) = 2 ( <i>At the open</i> ) <i>ExecInst</i> (18) = r ( <i>Late</i> )
<b>Late-Limit-On-Close (LLOC)</b>		<i>TimInForce</i> (59) = 7 ( <i>At the close</i> ) <i>ExecInst</i> (18) = r ( <i>Late</i> )
<b>Regular-Hours-Only (RHO)</b>	<i>TimInForce</i> (59) = R ( <i>Regular Hours Only</i> )	

### 5.12 Retail Orders

BZX, BYX, and EDGX allow for certain qualifying orders to be designated as Retail Orders. Such orders may be subject to special pricing as defined in the respective exchange’s Fee Schedule.

To designate an order as a Retail Order, set *ExtendedExecInst* (9416) = ‘R’ (Retail Order).

### 5.13 Retail Price Improvement Program (BYX Only)

Through the Cboe Retail Price Improvement Program, any BYX Exchange Member may input Retail Price Improving (RPI) orders on the BYX Exchange order book that will offer price improvement in \$.001 increments to Retail Member Organizations (RMOs) that enter a Retail Order (RO).

### 5.13.1 Retail Orders (Ros)

Ros may only be entered by RMOs. Ros will access price-improving liquidity in strict price/time priority as follows:

1. Ros may interact with both RPI orders as well as other price improving hidden liquidity (i.e. midpoint pegs). **Ros may receive price improvement at multiple price levels.**
2. Ros will then access displayed interest as well as hidden interest at the NBBO.
3. Ros may then route.

Ros may be entered by RMOs in 0.01 increments as follows:

- Retail Order – Type 1 – Price Improvement Only (*Only access price improving orders.*)
  - **Must** set *ExtendedExecInst* (9416) = 'P' (Retail Order – Price Improvement only)
  - **Must** set *TimelnForce* (59) = '3' (IOC)
  - **Must** set *RoutingInst* (9303) = 'B' (Book Only)
- Retail Order – Type 2 – Book Only (*Access price improving orders up to the limit price and access any liquidity available on Cboe at the limit price.*)
  - **Must** set *RoutingInst* (9303) = 'B'
  - **Must** set *ExtendedExecInst* (9416) = 'R' (Retail Order)
  - **Must** set *TimelnForce* (59) = '3' (IOC)
- Retail Order – Type 2 – Routable (*Access price improving orders up to the limit price and access any liquidity available on Cboe at the limit price. Then route out at the limit price.*)
  - *RoutingInst* (9303) and *ExecInst* (18) may be any combination of currently accepted values for routing purposes
  - **Must** set *ExtendedExecInst* (9416) = 'R' (Retail Order)
  - **Must** set *TimelnForce* (59) = '3' (IOC)

### 5.13.2 Retail Price Improving (RPI) Orders

Any BYX Exchange Member that has been certified by the Cboe Trade Desk may enter RPI orders in \$.001 increments. RPIs are only accessible to Ros. No other order type will interact with an RPI order.

RPIs may be entered in \$.001 increments by any BYX Exchange Member as follows:

- Retail Price Improving order:
  - **Must** set *RoutingInst* (9303) = 'B', 'P', or 'Q'
  - **Must** set *ExtendedExecInst* (9416) = 'T' (Retail Price Improving order)
  - *DisplayIndicator* (9479) = 'I' is implied but, like peg orders, not required; any other values for *DisplayIndicator* will be rejected.
- Retail Price Improving Peg order:
  - **Must** set *RoutingInst* (9303) = 'B', 'P', or 'Q'

Cboe US Equities  
FIX Specification (Version 2.8.5)

- **Must** set *ExtendedExecInst* (9416) = 'T' (Retail Price Improving order)
- **Must** set *ExecInst* (18) = 'R' (Primary Peg)
- **Must** set *PegDifference* (211). Price may be in 0.001 increments.
- *DisplayIndicator* (9479) = 'I' is implied but, like peg orders, not required; any other values for *DisplayIndicator* will be rejected.

#### 5.14 DIRC to IEX-Midpoint (BYX/EDGA Only)

BYX and EDGA offer a directed route strategy to IEX-Midpoint. Order sent with the below instructions may remove liquidity from the local exchange then route as an IOC midpoint to IEX with any unfilled shares cancelling back.

Tag	Field Name	Req'd	Comments
59	<i>TimeInForce</i>	Y	3 = IOC
18	<i>ExecInst</i>	Y	<b>M</b> = Execute on Cboe and route to IEX when NBBO is locked - or - <b>m</b> = Do not execute on Cboe market and do not route to IEX when the NBBO is locked.
40	<i>OrdType</i>	Y	P = Pegged
9400	<i>RoutStrategy</i>	Y	DIRC
100	<i>ExDestination</i>	Y	I

#### 5.15 Non-Displayed Swap (NDS)

An order with the NDS instruction is a hidden order that, once posted, may become a liquidity remover when a contra-side Post Only order enters the book at a price locking the resting NDS order.

In addition to standard Hidden Limit orders, the Non-Displayed Swap instruction may also be sent on Hidden Primary Pegs, Midpoint Pegs and Market Pegs.

Tag	Field Name	Req'd	Comments
9303	<i>RoutingInst</i>	Y	N = Non-Displayed Swap
9479	<i>DisplayIndicator</i>	Y	I = Hidden
40	<i>OrdType</i>	N	2 = Limit, P = Pegged

### 5.16 Cboe Market Close (CMC) (BZX Only) (Effective TBD)

Cboe Market Close on the BZX Exchange allows for Members to submit buy and sell Market-On-Close orders designated for participation in CMC in order to obtain the official closing price for any matched shares. Any remaining shares will be cancelled back to Members.

At 6:00 a.m. ET Members may enter new orders to participate in CMC. Members will populate the following FIX Tags to send a CMC order.

Tag	Field Name	Req'd	Comments
40	<i>OrdType</i>	Y	1 = Market
59	<i>TimelnForce</i>	Y	7 = At the Close
9303	<i>RoutingInst</i>	Y	B = Book Only

A FIX restatement will be sent for any fully or partially matched CMC order at approximately 3:35 p.m. ET. A standard cancel will be sent for any CMC order that does not have any matched quantity at this time. The restatement will contain the following fields:

Tag	Field Name	Description
35	<i>MsgType</i>	8 = Execution Report
20	<i>ExecTransType</i>	0 = New
150	<i>ExecType</i>	D = Restated
378	<i>RestatementReason</i>	C = CMC Restatement
32	<i>LastShares</i>	Number of Shares Cancelled (if any)
151	<i>LeavesQty</i>	Matched Size

After the closing price is received one or more executions, totaling the Matched Size, will be sent for each CMC order. The execution message will contain the following fields:

Tag	Field Name	Description
35	<i>MsgType</i>	8 = Execution Report
20	<i>ExecTransType</i>	0 = New
150	<i>ExecType</i>	1 = Partial Fill 2 = Full Fill
32	<i>LastShares</i>	Execution Size
31	<i>LastPx</i>	Execution Price (official close price)

If a closing price is not received from the primary listing exchange by 8:00 p.m. ET, then all CMC matched shares will be cancelled. In the event that a closing price is updated by the primary listing exchange after its initial publication, then a Trade Cancel Correct (FIX Tag 35=UCC) message will be sent to update the execution price for each CMC execution impacted by the changed closing price. **As a result, all firms that wish to submit CMC orders must be certified for Trade Cancel Correct messages on FIX before they will be allowed to submit CMC orders.**

## 6 Implementation Notes

### 6.1 Automatic Cancel on Disconnect or Malfunction

**All open orders for a member will be cancelled automatically if no messages have been received from the member for two heartbeat intervals.** This is done to prevent orders from being stuck in an unknown state in the event of telecommunications failure. Members should choose their heartbeat interval carefully based on the latency and reliability of their telecommunications channel. The minimum supported interval is 5 seconds, and this is also the recommended interval if the latency and reliability of your telecommunications channel support it. Execution Reports for the automatically cancelled orders are available upon reconnection. Members are responsible for rerouting orders to other market centers based on their business needs. This should be rare, but all open orders may also be cancelled in the event of a complete or partial system malfunction.

### 6.2 Service Bureau Configuration

Service Bureaus require special configuration. *OnBehalfOfCompld* should be set for New Order, Cancel and Cancel/Replace messages sent to Cboe. Orders with an unknown *OnBehalfOfCompld* will be rejected. *ClOrdId* values are required to be unique only within a given *OnBehalfOfCompld*. Execution Report and Cancel Reject messages sent by Cboe will have the *DeliverToCompld* set. **Orders must be cancelled or replaced using the same *OnBehalfOfCompld* as was sent on the Order.**

### 6.3 Common Session Level Issues

Cboe uses FIX 4.2 as specified by the FPL document **Version 4.2 (with Errata 20010501)** with business level extensions described in our own FIX spec. The session level of the FPL spec is followed as closely as possible.

The version with errata cleared up **many** ambiguities with session level present in the earlier Version 4.2 (March 1, 2000).

Important notes direct from the public FPL spec (**blue lines are anchor locations in the FPL document, bold emphasis is from original spec, purple emphasis added by Cboe, green notes added by Cboe**) :

#### 6.3.1 FINANCIAL INFORMATION EXCHANGE PROTOCOL / FIX MESSAGE FORMAT AND DELIVERY / Ordered Message Processing

The FIX protocol assumes complete ordered delivery of messages between parties. Implementers should consider this when designing message gap fill processes. Two options exist for dealing with gaps, **either request all messages subsequent to the last message received or ask for the specific message missed while maintaining an ordered list of all newer messages.** For example, if the receiver misses the second of five messages, the application **could ignore messages 3 through 5 and generate a resend request for messages 2 through 5, or, preferably 2 through 0 (where 0 represents**

**infinity**). Another option would involve saving messages 3 through 5 and resending only message 2. **In both cases, messages 3 through 5 should not be processed before message 2.**

### 6.3.2 FINANCIAL INFORMATION EXCHANGE PROTOCOL / SESSION PROTOCOL / Logon

After the initiator has been authenticated, the acceptor will respond **immediately** with a confirming *Logon* message.

### 6.3.3 FINANCIAL INFORMATION EXCHANGE PROTOCOL / SESSION PROTOCOL / Message Recovery

When the incoming sequence number does not match the expected number corrective processing is required. Note that the SeqReset-Reset message ([Cboe: this refers only to GapFillFlag=No 123=N] to be used only to recover from a disaster scenario vs. normal Resend Request processing) is an exception to this rule as it should be processed without regards to its MsgSeqNum. **If the incoming message has a sequence number less than expected and the PossDupFlag is not set, it indicates a serious error. It is strongly recommended that the session be terminated and manual intervention be initiated.** If the **incoming sequence number is greater than expected, it indicates that messages were missed and retransmission of the messages is requested via the Resend Request** (see the earlier section, *Ordered Message Processing*).

...

If there are consecutive administrative messages to be resent, **it is suggested that only one SeqReset-GapFill message be sent in their place.** The sequence number of the SeqReset-GapFill message is the next expected outbound sequence number. **The NewSeqNo field of the GapFill message contains the sequence number of the highest administrative message in this group plus 1.** For example, during a Resend operation there are 7 sequential administrative messages waiting to be resent. They start with sequence number 9 and end with sequence number 15. Instead of transmitting 7 Gap Fill messages (which is perfectly legal, but not network friendly), a SeqReset-GapFill message may be sent. **The sequence number of the Gap Fill message is set to 9 because the remote side is expecting that as the next sequence number.** The NewSeqNo field of the GapFill message contains the number 16, because that will be the sequence number of the next message to be transmitted.

Sequence number checking is a vital part of FIX session management. However, a discrepancy in the sequence number stream is **handled differently for certain classes of FIX messages.** The table below lists the actions to be taken when the incoming sequence number is greater than the expected incoming sequence number.

**NOTE: In \*ALL\* cases except the Sequence Reset – Reset message, the FIX session should be terminated if the incoming sequence number is less than expected and the PossDupFlag is not set. A Logout message with some descriptive text should be sent to the other side before closing the session.**

### Response by Message Type

Message Type	Action to Be Taken on Sequence # Mismatch
Logon	Must always be the first message transmitted. Authenticate and accept the connection. <b>After sending a Logon confirmation back, send a ResendRequest</b> if a message gap was detected in the Logon sequence number.

....

#### 6.3.4 FINANCIAL INFORMATION EXCHANGE PROTOCOL / ADMINISTRATIVE MESSAGES / Resend Request

Note: the **sending application may wish to consider the message type when resending messages**; e.g. if a new order is in the resend series and a significant time period has elapsed since its original inception, the sender may not wish to retransmit the order given the potential for changed market conditions. (The Sequence Reset-GapFill message is used to skip messages that a sender does not wish to resend.)

#### 6.3.5 FINANCIAL INFORMATION EXCHANGE PROTOCOL / ADMINISTRATIVE MESSAGES / Sequence Reset (Gap Fill)

The Sequence Reset message is used by the sending application to reset the incoming sequence number on the opposing side. **This message has two modes: Sequence Reset-Gap Fill when GapFillFlag is 'Y'** and Sequence Reset-Reset when GapFillFlag is N or not present. The Sequence Reset-Reset mode should **ONLY** be used to recover from a disaster situation which cannot be otherwise recovered via "Gap Fill" mode. The Sequence Reset message can be used in the following situations:

- During normal resend processing, the sending application may choose not to send a message (e.g. an aged order). The Sequence Reset – Gap Fill is used to mark the place of that message.
- During normal resend processing, a number of **administrative messages are not resent, the Sequence Reset – Gap Fill message is used to fill the sequence gap** created.

...

The sending application will initiate the sequence reset. **The message in all situations specifies NewSeqNo to reset as the value of the next sequence number immediately following the messages and/or sequence numbers being skipped.**

...

If the GapFillFlag field is present (and equal to Y), the MsgSeqNum should conform to standard message sequencing rules (i.e. the MsgSeqNum of the Sequence Reset-GapFill message **should represent the beginning MsgSeqNum in the GapFill range** because the remote side is expecting that next message).

The sequence reset can only increase the sequence number. If a sequence reset is received attempting to decrease the next expected sequence number the message should be rejected and treated as a

serious error. It is possible to have multiple ResendRequests issued in a row (i.e. 5 to 10 followed by 5 to 11). **If sequence number 8, 10, and 11 represent application messages while the 5-7 and 9 represent administrative messages**, the series of messages as result of the Resend Request may appear as **SeqReset-GapFill with NewSeqNo of 8, message 8, SeqReset-GapFill with NewSeqNo of 10, and message 10**. This could then followed by SeqReset-GapFill with NewSeqNo of 8, message 8, SeqReset-GapFill with NewSeqNo of 10, message 10, and message 11. One must be careful to ignore the duplicate SeqReset-GapFill which is attempting to lower the next expected sequence number. This can be detected by checking to see if its MsgSeqNum is less than expected. If so, the SeqReset-GapFill is a duplicate and should be discarded.

#### **6.4 OATS Connection ID**

The OATS technical spec allows for an optional 'connectionId' field to be included in your OATS feeds for the purposes of improving your order ID uniqueness. When creating OATS rows related to your FIX transmissions to Cboe, Cboe recommends populating the OATS 'connectionId' field with the *senderSubId* – FIX field 50. Please note that this field is optional on your OATS rows, and Cboe is not recommending a perspective that you do or do not populate the field. Also note that while not enforced internally, the Cboe spec does require that your client order ID be day-unique; Cboe continues to recommend this as the best way to meet OATS' day-unique order ID requirements.

#### **6.5 OATS Exchange Participant ID (EPID)**

While most Members should use *ClearingFirm* (439) for their OATS EPID, Service Bureaus should use *OnBehalfOfCompld* (115).

## 7 FIX Drop

Cboe offers two types of FIX Drop ports (Standard FIX Drop and Order by Order FIX Drop). Both port types do not accept orders. Their purpose is to provide real time information about order flow. They may be configured to send order flow based on various combinations of information relating to specific member firms, clearing MPIDS and/or sessions. With proper authorization (e.g. clearing or sponsored relationships), a single FIX Drop session can be used to obtain information about multiple members.

### 7.1 Standard FIX Drop

Standard FIX Drop ports only send execution information (i.e. Execution Reports where *ExecType* (150) is Partially Filled (1) or Filled (2)).

### 7.2 Order by Order FIX Drop

Order by Order FIX Drop ports are designed to send more than execution information.

All order message types are supported including, but not limited to Acknowledgements (150=0), Partially Filled (150=1), Filled (150=2), Cancelled (150=4), Replaced (150=5), Rejected (150=8), Order Cancel Rejects (35=9) and optionally (if configured at the port level) Trade Breaks (35=UCC). If the Rejects/Cancel is due to incomplete clearing information, they may be unavailable on Order by Order FIX Drop ports.

Users of Order by Order FIX Drop must always be prepared to receive new/unknown FIX tag and FIX tag values for BOE/FIX ports being monitored. Cboe reserves the right to add new FIX tags and to update values distributed on Order by Order FIX Drop with no notice.

### 7.3 FIX Drop Port Attributes

Unless specified, both types of FIX Drop ports can be configured with the following features:

Attribute	Default	Description
Symbology	Cboe	Support for Cboe, CMS or CQS.
Send Trade Breaks	No	Enables Trade Cancel/Correct messages (35=UCC). Please note that enabling these messages on Order by Order FIX Drop port will be dependent on enabling Trade Cancel/Correct messages on corresponding BOE and/or FIX order entry ports.
Unique Wash Execution Ids	No	Appends a ".B" or ".S" to <i>ExecID</i> (17) on all trades.
Concatenate Compld and SubId	No	Requires all FIX traffic to contain concatenated (combined) <i>Compld</i> and <i>SubIds</i> .
Send <i>OrigCompld/OrigSubID</i>	No	Send <i>OrigCompld</i> (9688) and <i>OrigSubID</i> (9689).
Send <i>Account</i>	No	Send <i>Account</i> (1).
Copy <i>ClearingFirm</i> to <i>Account</i>	No	Set <i>Account</i> (1) equal to <i>ClearingFirm</i> (439).
Send <i>OrdType</i>	No	Send <i>OrdType</i> (40). <b>Standard FIX Drop only.</b> Order by Order FIX Drop will receive FIX Tag 40 based on FIX order entry port attribute "Echo Tag 40 on Ack".
Send <i>Capacity</i>	No	Send <i>OrderCapacity</i> (47). <b>Standard FIX Drop only.</b> Order by Order FIX Drop receives this field by default.
Send Routing Instructions	No	<b>Order by Order FIX Drop only.</b>  Send <i>RoutingInst</i> (9303), <i>RoutDeliverMethod</i> (9350) and <i>RoutStrategy</i> (9400).

## 8 FIX Port Attributes

The table below lists FIX port attributes that are configurable on the port or firm level. Changes to these attributes can be made by sending a written request to [tradedesk@cboe.com](mailto:tradedesk@cboe.com).

Note that any changes made to any port attribute will not be enforced on carried GTC orders. Members who wish to apply updated port attributes to resting GTC orders must cancel those orders, and then resubmit them following the effective time of the port attribute change.

Attribute	Default	Description
Allowed Clearing MPID(s)*	All MPIDs	Clearing MPID(s) allowed for trading on port.
Default Clearing MPID	None	Default MPID to use if none is sent on New Order.
Allow Pre-market*	Yes	Allows for orders to be entered prior to Regular Session open.
Allow Post-market*	Yes	Allows for orders to be entered after the Regular Session close.
Allow Short Sales*	Yes	Allows or disallows short sales.
Allow ISO*	Yes	Allows or disallows ISO orders.
Allow Directed ISO*	Yes	Allows or disallows ISO orders directed to other market centers.
Allow Test Symbols Only	No	Allow or disallow orders in non-test symbols.
Default Routing Instruction†	9303=RD 9350=RTI 9400=ROUT	Specifies a default value for Tags 9303 ( <i>RoutingInst</i> ), 9350 ( <i>RoutDeliveryMethod</i> ), and 9400 ( <i>RoutStrategy</i> ) when 9303 = "R". Fields can be overridden at the order level.
Default Routing Instruction (Hidden Order Override)†	Use Default Routing Instruction	Specifies a default value for Tag 9303 ( <i>RoutingInst</i> ) that is applied to hidden orders only.
Default Exec. Instruction†	None	Specifies a default value for Tag 18 ( <i>ExecInst</i> ).
Maximum Order Size*	25,000	Maximum number of shares allowed per order.
Maximum Order Dollar Value*	Unlimited	Maximum order dollar value per order.
Default Price Sliding†	"S"	Default price sliding behavior. See Tag 9479 ( <i>DisplayIndicator</i> ).
Default Pricing Sliding (Hidden Order Override)†	"S"	When a different default price sliding behavior is desired for hidden orders, this port attribute may be used. See Tag 9479 ( <i>DisplayIndicator</i> ).

Cboe US Equities  
FIX Specification (Version 2.8.5)

Cancel on ME Disconnect	Yes	When set to “No”, this setting allows orders to remain open on a Matching Unit failover. When set to “Yes”, all open orders associated with a session are immediately cancelled in the event of loss of connectivity to a Matching Unit. In any event, if a failover takes longer than five minutes, all orders are cancelled unconditionally.
Cancel on Disconnect	<i>Option #1</i>	Cboe will offer Members 3 options for cancelling orders as a result of a session disconnect: <ul style="list-style-type: none"> <li>1. Cancel Continuous Book Orders Only (default)</li> <li>2. Cancel All Open Orders (continuous books and On-Open, On-Close and Late orders)*</li> <li>3. Do Not Cancel Any Open Orders</li> </ul> <p><i>*If disconnect occurs during the cut-off period for an auction, On-Open, On-Close and Late orders that are to participate in the auction will not be cancelled.</i></p>
Send Trade Breaks <sup>^</sup>	No	Enables Trade Break Messages (35=UCC).
Default MTP Value*†	None	Specifies Default value for <i>PreventMemberMatch</i> (7928).
Report MTP Fields* <sup>^</sup>	No	Enables <i>LastPx</i> (31), <i>LeavesQty</i> (32) and <i>SecondaryOrderId</i> (198) on Execution Reports caused by MTP.
Allow MTP Decrement Override*	No	Overrides the exception that requires both the resting and inbound order to be marked as “Decrement”.
Allow Sponsored Participant MTP Control*	No	Allows Sponsored Participant to override port default for MTP by using <i>PreventMemberMatch</i> (7928) on order-level.
Concatenate CompId and SubId	No	Requires all FIX traffic to contain concatenated (combined) Comp and SubIds.
Cancel on Reject†	No	Cancels an order upon a cancel or modify reject for that order.
Cancel on Halt	No	Cancel open orders for a symbol upon a halt.
Report Working Price	No	Reports <i>WorkingPrice</i> (9690) and <i>InitialDisplayPrice</i> (9691).
Unique Wash Execution Ids	No	Appends a “.B” or “.S” to <i>ExecID</i> (17) on all trades.
Opt-out of PITCH Obfuscation	No	Opt-out all orders from PITCH Order Id obfuscation for hidden and reserve orders.
Enable State Change Tracking <sup>^</sup>	No	Allows for tracking of the state of routable orders. See Section 4.5.1.1 (State Change Tracking) for more information.

Cboe US Equities  
FIX Specification (Version 2.8.5)

Decrement Remainder Only	No	Enables “d” option for MTP. See <i>PreventMemberMatch</i> (7928) for details.
Restate on Reload^	No	Generates FIX Restatement on reserve order reload with new PITCH Order Id in Tag 198, and populates the new PITCH Order ID in Tag 198 of a Cancel/Replace acknowledgement that increases the size of a reserve order.
Echo Tag 40 on Ack	No	Return <i>OrdType</i> (40) value on FIX Ack. Note that this value will also be returned on Order by Order FIX DROP.
Echo Tag 47 on Ack	No	Return <i>OrderCapacity</i> (47) value on FIX Ack. Note that this value will also be returned on Order by Order FIX DROP.
Microsecond Timestamp Granularity	No	Display microsecond level timestamp granularity for <i>TransactTime</i> (60), <i>OrigTime</i> (42) and <i>SendingTime</i> (52). These tags default to millisecond or second granularity.
Fat Finger Protection*	None	Specifies a percentage or dollar based limit price tolerance where any orders entered with a limit price that is through the NBBO by an amount greater than or equal to the defined percentage or dollar amount will be rejected. Limits may be different for different price ranges. Does not apply to RHO orders entered prior to the open until they move to continuous trading.  Please see the <a href="#">Web Portal Port Controls Specification</a> for more details.
Reject Orders on DROP Port Disconnect*	No	Allows Member/Sponsoring Firms to associate a DROP port(s) to an order entry port(s). Once the association has been established, if no DROP ports associated with an order entry port are connected, reject orders on the order entry port until at least one of the DROP port session connections have been established.
Reject Orders on DROP Port Timeout (s)*	30	Only applicable for sessions where “Reject Orders on DROP Port Disconnect” has been enabled. When the last associated DROP port for the order entry session has disconnected, the reject/cancel actions will be taken on the order entry session if an associated DROP port has not reestablished its connection in the defined time. Minimum value allowed is 20.

Cboe US Equities  
FIX Specification (Version 2.8.5)

Cancel Open Orders on DROP Port Disconnect*	No	Only applicable for sessions where “Reject Orders on DROP Port Disconnect” has been enabled. If all DROP ports associated with an order entry port become disconnected, cancel all open orders on the order entry port.
Session Close Handling	Option #1	<p>Customize message that would normally be sent at the regular market (4PM) and session close (5PM for BYX/BZX and 8PM for EDGA/EDGX). Also functional during early close situations. Times in ET.</p> <p>Options supported are as follows:</p> <ol style="list-style-type: none"> <li>1. <b>Send Cancels</b> (Default) – A Cancel message will be sent for all expired orders.</li> <li>2. <b>Suppress Cancels</b> – No message will be sent and it is the Member’s responsibility to close all expired orders in their system.</li> </ol> <p><b>Send DoneForDay</b> – A DoneForDay message will be sent in place of the Cancel message for each order that has expired and is no longer eligible for execution. DoneForDay messages are sent via <i>OrdStatus</i> (39) = “3” and <i>ExecType</i> (150) = “3”.</p>
Notional Cutoff Aggregation Methods*		<p>Gross exposure = CBB + CBO + CEB + CEO.</p> <p>Net exposure = ABSOLUTE VALUE of [(CEO + CBO) – (CEB+CBB)]</p> <p>On a given port Cboe will calculate and track four values as follows:</p> <ul style="list-style-type: none"> <li>➤ <b>Cumulative Notional Booked Bid Value (CBB)</b> – The sum of limit price * size for all buy limit orders on the book.</li> <li>➤ <b>Cumulative Notional Booked Offer Value (CBO)</b> – The sum of limit price * size for all sell limit orders on the book.</li> <li>➤ <b>Cumulative Notional Executed Bid Value (CEB)</b> – The sum of size * trade price on all executed buy orders.</li> <li>➤ <b>Cumulative Notional Executed Offer Value (CEO)</b> – The sum of size * trade price on all executed sell orders.</li> </ul>

Cboe US Equities  
FIX Specification (Version 2.8.5)

Gross Daily Risk Limit Order Notional Cutoff*	None	Optional parameter that if specified will result in rejects for <b>limit</b> orders when <b>gross</b> exposure of limit orders exceeds this value. Whole dollar value not to exceed \$1B/port.
Gross Daily Risk Limit Order Notional Warn %	None	Optional parameter that will generate an email notification when the corresponding Cutoff risk limit exceeds a user defined percentage.
Gross Daily Risk Market Order Notional Cutoff*	None	Optional parameter that if specified will result in rejects for <b>market</b> orders when <b>gross</b> exposure of limit orders exceeds this value. Whole dollar value not to exceed \$1B/port.
Gross Daily Risk Market Order Notional Warn %	None	Optional parameter that will generate an email notification when the corresponding Cutoff risk limit exceeds a user defined percentage.
Net Daily Risk Limit Order Notional Cutoff*	None	Optional parameter that if specified will result in rejects for <b>limit</b> orders when <b>net</b> exposure of limit orders exceeds this value. Whole dollar value not to exceed \$1B/port.
Net Daily Risk Limit Order Notional Warn %	None	Optional parameter that will generate an email notification when the corresponding Cutoff risk limit exceeds a user defined percentage.
Net Daily Risk Market Order Notional Cutoff*	None	Optional parameter that if specified will result in rejects for <b>market</b> orders when <b>net</b> exposure of limit orders exceeds this value. Whole dollar value not to exceed \$1B/port.
Net Daily Risk Market Order Notional Warn %	None	Optional parameter that will generate an email notification when the corresponding Cutoff risk limit exceeds a user defined percentage.
Default Attributed Quote*†%	Never	Specifies a default value for <i>AttributedQuote</i> (9732). May only override at order to level after executing Attribution Addendum to Exchange User Agreement. Once Addendum has been executed, may default to Yes, No, or RTAL through Cboe Trade Desk.
Crossed Market Reject/Cancel	No	Reject new orders upon receipt when the NBBO in the subject security is crossed. Routable orders will have any remaining quantity cancelled back if the NBBO is crossed when the order returns to the Cboe Book. Order modifications which cause a loss of priority (e.g. due to a price change or increase in size) will result in a cancel of the original order if the NBBO is crossed upon receipt of the modify instruction.

Cboe US Equities  
FIX Specification (Version 2.8.5)

Send Peg Restatements <sup>^</sup>	<i>Option #1</i>	Send order restatements for Peg order moves.  <ol style="list-style-type: none"> <li>1. No Peg restatements (default)</li> <li>2. Market Maker Peg orders only</li> <li>3. All Peg orders except Market Maker Peg orders</li> <li>4. All Peg orders</li> </ol>
Default to Retail Order†% <sup>^</sup>	None	Default <i>ExtendedExecInst</i> (9416) = “R” or “P”.
Use Compliance ID	No	Returns the value passed in <i>ComplianceID</i> (376) in <i>ClOrdID</i> (11).
Routing Retail Indicator (EDGX Only)	No	Mark orders as retail when routing to dark liquidity pools.
Single Order ADV Check*	None	Reject orders when order size exceeds a specified percentage of the 20-day ADV. Members may also specify a 20-day ADV amount below which the check will not be applied.
Duplicative Order Protection Time Threshold	None	Time window, in seconds, for Duplicative Order Protection check.
Duplicative Order Protection Order Count Threshold	None	Number of orders with the same <i>ClearingFirm</i> , <i>Price</i> , <i>OrdQty</i> , and <i>Symbol</i> that must be seen within the Duplicative Order Time Threshold to initiate Duplicative Order Protection Action.
Duplicative Order Protection Action	<i>Option #1</i>	Action taken when Duplicative Order Protection criteria is met.  <ol style="list-style-type: none"> <li>1. Not enabled</li> <li>2. <u>Reject</u> new orders for remainder of Duplicative Order Time Threshold</li> <li>3. <u>Disable port</u> for <i>ClearingFirm</i>. Must call Cboe Trade Desk to re-enable.</li> </ol>
All Routable To Halt Auction (BZX and EDGX Only)	No	Send all routable orders to the halt auction on the primary listing exchange. This applies to all routing strategies.
Early Trading Session Opt-Out	No	Allows for orders to be executable during the Early Trading Session (7:00 AM to 8:00 AM). If set to Yes, then the following <i>TimeInForce</i> (59) values will be translated.  <ul style="list-style-type: none"> <li>• 0 (DAY) -&gt; E (PRE)</li> <li>• 5 (GTX) -&gt; X (PTX)</li> <li>• 6 (GTD) -&gt; T (PTD)</li> </ul>

Cboe US Equities  
FIX Specification (Version 2.8.5)

Port Order Rate Threshold	Default = 5000 msgs/sec  Max allowed = 5000 msgs/sec	The maximum allowed message rate on the session. When the first non-administrative message is received, a one second window begins. During the second no more than 4,999 additional non-administrative messages will be allowed within that window. If the rate is exceeded all new orders in the time window are rejected, modifies are treated as cancels, and cancels are processed.
Symbol Order Rate Threshold	5000 msgs/sec	Functions the same as the Port Order Rate Threshold but is calculated at the symbol level. It is capped by the Port Order Rate Threshold.
Reject Market Orders Without NBBO	No	Reject Market Orders (including unpriced Peg Orders and Stop Orders) when there is no NBBO on the opposite side.
Enable True <i>MinQty</i>	No	Do not aggregate multiple contra orders to meet the <i>MinQty</i> specified on an order.

\* Sponsored Participants require written approval from Sponsors to update these settings on ports associated to a Sponsor's MPID.

† Port attribute can be overridden via FIX on an order by order basis.

% Requires agreement for use of feature.

^ Requires certification.

## Revision History

Document Version	Date	Description
2.0.0	04/04/14	Merged Bats BYX, BZX, EDGA and EDGX FIX specifications in preparation for the Bats/Direct Edge integration.
2.0.1	04/30/14	Minor updates to certification requirement in FIX Port Attributes section. Changed <i>AttributedQuote</i> (Tag 9732) ID for retail from “RTL” to “RTAL”.
2.0.2	06/05/14	Removed references to NSX. Added OATS EPID section. Changed <i>AttributedQuote</i> (Tag 9732) ID for retail from “RETL” to “RTAL”. Removed <b>highlighting</b> for features where a release date has been announced for BYX Exchange, BZX Exchange and/or Cboe Options.
2.0.3	07/01/14	Midpoint Discretionary Order no longer planned to be offered on BYX Exchange and EDGX Exchange.
2.0.4	07/09/14	Removed <b>highlighting</b> for features where a release date has been announced for BYX Exchange and BZX Exchange. Corrected default Price Sliding port attribute setting for EDGX.
2.0.5	07/31/14	Renamed “Suppress Cancels on Session Close” Port Attribute to “Session Close Handling” and updated options. Added support for DoneForDay messages (refer to “Session Close Handling” Port Attribute). Removed <b>highlighting</b> for features where a release date has been announced for BYX Exchange, BZX Exchange and/or Cboe Options. Added reject code <i>Text</i> (Tag 58) = “M: Liquidity Available Exceeds Order Size” in support of SWPB.
2.0.6	08/06/14	Added <i>Text</i> (Tag 58) = “E” to indicate a reduction in <i>OrdQty</i> due to SWP restatement as a result of an IOC SWP order having size greater than the displayed quantity of all protected market centers. Used in conjunction with <i>ExecRestatementReason</i> (Tag 378) = “5” and <i>ExecType</i> (Tag 150) = “D”.
2.0.7	08/29/14	Defined “w” cancel reason in <i>Text</i> (FIX Tag 58) field. Updated Peg order details to allow for use of displayed Primary pegs. Added <i>RoutingInst</i> (Tag 9303) = K.

Cboe US Equities  
FIX Specification (Version 2.8.5)

2.0.8	9/23/14	ROUC is no longer planned for release on BYX Exchange or BZX Exchange. It will continue to be supported on EDGA Exchange and EDGX Exchange. Removed highlighting for features where a release date has been announced for BYX Exchange, BZX Exchange and/or Cboe Options.
2.0.9	9/29/14	Removed highlighting for features where a release date has been announced for BYX Exchange, BZX Exchange and/or Cboe Options. Updated Hours of Operation section to account for new Opening Process on BYX Exchange and BZX Exchange. Effective 12/01/14.
2.0.10	10/01/14	Correction to Midpoint Match order definition in section 5.10. OrdType (Tag 40) must equal "P".
2.0.11	10/08/14	Removed highlighting for features where a release date has been announced for BYX Exchange, BZX Exchange and/or Cboe Options.
2.1.0	10/23/14	Deprecated FIX v1 specifications. Added v1 messages that continue to be supported (i.e. ExchangeFeeCode tag 9621 and Routing V1 tags). TimeInForce (Tag 59) = "R"HO supported for all symbols on BYX Exchange and BZX Exchange. Effective 12/01/14. OrdType (Tag 40) Market implies TimeInForce (Tag 59) of DAY on BYX Exchange and BZX Exchange. Effective 11/14/14. Added support for Execlnst (Tag 18) of o = Listing Market Opening on BYX Exchange and BZX Exchange. Available effective 12/03/14. Added support for Execlnst (Tag 18) of c = Listing Market Close on BYX Exchange and BZX Exchange. Available effective 12/03/14. Added support for Execlnst (Tag 18) of a = Both Listing Market Open and Close on BYX Exchange and BZX Exchange. Available effective 12/03/14. Added support for RoutStrategy (v2 Tag 9400) = ROOC on BYX Exchange and BZX Exchange. Available effective 12/03/14.
2.1.1	10/27/14	Updated table in section 5.4.4 to indicate that Market Maker Pegs must be Post Only.
2.1.2	11/7/14	Removed restriction that MPM orders must have been sized greater than or equal to an odd lot. Added recommended mapping to FIX Tag 851 in TradeLiquidityIndicator (FIX Tag 9730) Added "w" and "v" values back to Execlnst (FIX Tag 18) for v1 Routing. Updated RoutingInst v2 (FIX Tag 9303) to indicate that Post Only at Limit is supported on BZX and BYX only.
2.1.3	12/2/14	Added Use Compliance ID to list of FIX Port Attributes. Allow for MaxRemovePct (Tag 9618) to be sent with zero value to EDGA and EDGX.

Cboe US Equities  
FIX Specification (Version 2.8.5)

2.1.4	12/17/14	Removed effective date references where date has passed.
2.1.5	1/15/15	Added Midpoint Discretionary Order to Order Types and Features section. Corrected default sliding values in Re-Priced Orders section. Added “CLC” value to ContraBroker (FIX Tag 375). Removed reference to legacy Direct Edge FIX Specification.
2.1.6	1/29/15	Removed all references to Lava FLOW and ROLF strategy. Last supported trading day for Lava FLOW is 1/30/15.
2.1.7	2/25/15	Updated description of Unique Wash Execution Ids port attribute. Added language to Logon message clarifying behavior around one second wait period after Logon is received. Updated RoutingInst v1 (FIX Tag 9303) to add “Z” value back for v1 Routing.
2.1.8	3/24/15	Added value of “s” to Text (FIX Tag 58) field for duplicative order rejects.
2.1.9	5/19/15	Clarifications made Discretionary Order and Re-Route Orders in the Order Types and Features section. Functionality modifications to EDGX to align with the other Cboe equity exchanges (effective 7/6/15). EDGX Midpoint Match translated as Midpoint Peg No Lock (effective 7/6/15). EDGX price sliding default changed to Display Price Sliding (effective 7/6/15). EDGX and EDGX discretionary order behavior changed to match BZX and BYX (effective 7/6/15)
2.1.10	6/9/15	ROOC orders with an ExecInst (FIX Tag 18) = “c” can route to halt auctions (effective 6/12/15).
2.2.0	7/6/15	Removed all references to Midpoint Match and Hide Not Slide.
2.2.1	7/16/15	Updated TradeLiquidityIndicator (FIX Tag 9730) to not restrict a 2nd Character of ‘m’ to the BYX Exchange
2.2.2	7/27/15	RoutStrategy (FIX Tag 9400) value of “ROOC” available on BZX and EDGX exchanges only. Effective 08/10/15
2.2.3	8/5/15	Added values to <i>RoutingInst (v1)</i> (FIX Tag 9303), <i>ExDestination</i> (FIX Tag 100), and <i>ContraBroker</i> (FIX Tag 375) in anticipation of NSX reactivation on 8/31/15. Added <i>Routing Retail Indicator</i> port attribute (EDGX only). Effective 9/10/15 Added <i>Single Order ADV Check</i> port attribute. Effective 8/14/15 Updated description of <i>Fat Finger Protection</i> port attribute.
2.3.0	8/21/15	Added <i>EffectiveTime</i> (FIX Tag 168). Added <i>Duplicative Order Protection</i> port attributes.

Cboe US Equities  
FIX Specification (Version 2.8.5)

2.3.1	9/3/15	Changed effective date for <i>EffectiveTime</i> (FIX Tag 168).
2.3.2	11/23/15	Updated description of ROBB and ROCO <i>RoutStrategy</i> (FIX Tag 9400) values. Added Port Attribute “All Routable To Halt Auction”. Effective 12/4/15 Added support for ALL Cboe routing strategy, <i>RoutStrategy</i> (FIX Tag 9400) = “ALLB”.
2.4.0	2/19/16	Added Supplemental Peg Order to Order Types and Features section. Removed <i>EffectiveTime</i> (FIX Tag 168). Updated Stop Order in Order Types and Features to indicate that <i>TimelnForce</i> (FIX Tag 59) is required. Cboe branding/logo changes.
2.4.1	2/24/16	Updated reason code for restatement messages <i>ExecRestatementReason</i> (FIX Tag 378) Effective 3/10/16
2.4.2	3/24/16	Updated description of Aggressive and Super Aggressive <i>RoutingInst</i> (FIX Tag 9303) values. Updated description of <i>Text</i> (FIX Tag 58) Update description of <i>RoutStrategy</i> (v2) (FIX Tag 9400) to state routeable ISOs must be sent with “DIRC”. Effective 4/25/16
2.5.0	4/12/16	Additional Cboe branding changes. Added three new <i>TimelnForce</i> (FIX Tag 59) values to support addition of Early Trading Session. Effective as early as 5/23/16 Added Early Trading Session Opt-Out port attribute. Effective as early as 5/23/16 Updated Hours of Operation. Effective as early as 5/23/16 Effective Dates by Exchange: <ul style="list-style-type: none"> <li>• BYX – 5/23/16</li> <li>• EDGA – 5/24/16</li> <li>• BZX – 5/25/16</li> <li>• EDGX – 5/26/16</li> </ul>
2.5.1	4/18/16	Removed some route strategies. Removal of IOCM and ICMT effective May 5, 2016 on BYX Exchange and May 6, 2016 on EDGA Exchange. Removal of TRIM3 and TRIM3- effective May 6, 2016 on BZX Exchange.
2.5.2	4/25/16	Clarified when “Fat Finger Protection” is applied.
2.5.3	5/6/16	Added 4 “Warn %” Port Attributes which are associated with the “Daily Notional Cutoff” Port Attributes. Corrected the number of available peg order types.

Cboe US Equities  
FIX Specification (Version 2.8.5)

2.5.4	7/13/16	Updated Prices section for securities in one of the Tick Size Pilot Program Test Groups. <i>Effective 10/3/16.</i> Added Trade At ISO value to <i>ExecInst</i> (FIX Tag 18). <i>Effective 10/3/16.</i> Added <i>ExDestination</i> (FIX Tag 100) value for IEX. <i>Effective 8/19/16.</i> Added <i>ContraBroker</i> (FIX Tag 375) value for IEX. <i>Effective 8/1/16.</i>
2.5.5	8/12/16	Updated Effective Date for supporting <i>ExDestination</i> (FIX Tag 100) value for IEX to 8/19/16
2.5.6	9/13/16	Updated language for <i>ExDestination</i> (FIX Tag 100) related to Post-to-Away routing.
2.5.7	9/15/16	Removed DE Compatibility Mode References Cboe Legacy Routing Mode ( <i>RoutingInst v1</i> ) to be discontinued <i>effective 9/30/16.</i>
2.6.0	10/5/16	Removed references to Cboe Legacy Routing Mode ( <i>RoutingInst v1</i> ).
2.6.1	1/25/17	Corrected typo in <i>Logout</i> message. Updated <i>DiscretionAmount</i> (FIX Tag 9622) to clarify it is not compatible with Post Only routing instructions. Added section 5.14 to describe DIRC to IEX-Midpoint routing Added DIRC to IEX-Midpoint value to <i>RoutStrategy</i> (FIX Tag 9400).
2.6.2	3/14/17	Removed references to legacy DROP protocol. Added “Port Order Rate Threshold”, “Symbol Order Rate Threshold”, “Allow Test Symbols Only” and “Allow Directed ISO” Port Attributes.
2.6.3	3/29/17	Added RMPL <i>RouteStrategy</i> (FIX Tag 9400).
2.6.4	5/17/17	Added Cancel on ME Disconnect port attribute.
2.6.5	6/9/17	Added IEX to the TRIM, TRIM-, TRIM2, and TRIM2- <i>RoutStrategy</i> (FIX Tag 9400). Added Non-Displayed Swap (NDS) order. <i>Effective 7/21/17.</i>
2.6.6	8/10/17	Added Default Routing Instruction (Hidden Order Override) port attribute.
2.6.7	8/17/17	Added Hidden MDO functionality to EDGA.
2.6.8	9/19/17	Updated effective date for EDGA Hidden MDO to 9/15/17.
2.6.9	10/17/17	Cboe branding/logo changes.
2.6.10	12/04/17	Updated <i>TimeInForce</i> (59) requirements for Displayed Primary Peg with non-aggressive <i>PegDifference</i> (211). <i>Effective 12/15/17.</i>

Cboe US Equities  
FIX Specification (Version 2.8.5)

2.6.11	1/24/18	<p>Updated <i>DisplayIndicator</i> (9479) to refer to section 5.4 Peg Orders for applicability of the invisible 'I' instruction.</p> <p>Updated section 5.4.5 Supplemental Peg Order to eliminate incorrect values.</p> <p>Reworked the <i>Order Cancel/Replace Request</i> message to clarify when an order loses time priority and to harmonize with BOE.</p> <p>Post to Away orders must be limit orders.</p>
2.6.12	2/2/18	<p>Added Port Attribute "Reject Market Orders Without NBBO". (Effective 2/16/18)</p>
2.6.13	3/20/18	<p>Updated the market centers that support Post to Away in <i>ExDestination</i> (100).</p> <p>Added port attribute "Default True MinQty" (effective 4/18/18).</p>
2.7.0	3/27/18	<p>Added Cboe Market Close (CMC) functionality (<b>effective TBD</b>).</p> <p>Clarified that a zero <i>MaxFloor</i> (111) on an <i>Order Cancel/Replace Request</i> will be ignored.</p>
2.7.1	5/8/18	<p><i>LastShares</i> (32) will be used to report the number of shares cancelled on Cboe Market Close restatements.</p> <p><i>CumQty</i> (14) will not report matched shares on CMC restatements and will instead be zero.</p> <p><i>LeavesQty</i> (151) will be used for matched shares on CMC restatements.</p> <p>Updated description of Aggressive and Super Aggressive <i>RoutingInst</i> (9303) values.</p>
2.7.2	5/11/18	<p>Updated description on <i>MinQty</i> (110) behavior and changes related to the release of Enable True MinQty port attribute.</p>
2.7.3	6/8/18	<p>Added support for <i>RoutingInst</i> (9303) = N (NDS) on BYX, BZX, and EDGA (effective 6/14/18).</p>
2.7.4	6/13/18	<p>Updated description for Re-Route behavior as it relates to Super Aggressive routing instructions. Effective 07/10/2018 for EDGA, 07/12/2018 for BXZ, BYX, and EDGX.</p>
2.8.0	8/23/18	<p>Added support for Equities Purge Ports (effective 10/1/18). Added Purge Request, Purge Acknowledgement, and Purge Rejected message types. Added definitions for <i>MassCancelID</i> (7695), <i>MassCancelInst</i> (7700), <i>CustomGroupID</i> (7699), <i>CustomGroupIDCnt</i> (7698), and <i>RiskReset</i> (7692) fields.</p> <p>Updated Trading Sessions to reflect that BZX is open until 8:00 p.m. ET.</p> <p>MDO <i>ExecInst</i>(18) added to EDGX effective 10/3/18.</p>

Cboe US Equities  
FIX Specification (Version 2.8.5)

2.8.1	9/13/18	Added CLNK as new value for <i>RoutStrategy</i> (9400) and h=HRT Execution Services LLC as new value for <i>ExDestination</i> (100). Effective 9/24/18 for EDGA only.
2.8.2	10/2/18	Updated trading session information to reflect extension of BYX Post-Market Session hours to 8:00 PM.
2.8.3	12/7/18	Updated Discretionary Order behavior, indicating liquidity swap no longer applies to EDGA.
2.8.4	3/4/19	Added l=Virtu VEQ Link and v=Virtu VEQ as new values for <i>ExDestination</i> . Effective 3/8/19 for EDGA only.
2.8.5	3/22/19	Updated ROBB and ROCO routing strategies on EDGA. Updated TRIM and TRIM- on BYX and BZX. Deprecated TRIM2 and TRIM2- on BYX and BZX. Deprecated SWPB routing strategy for all exchanges ( <b>effective 05/01/19</b> ).
