US
Secure Web API

Version 1.11.7

November 9, 2023

Contents

1 Introduction

1.1 Overview

The Secure Web API allows client applications to view and update data using the HTTPS protocol over the Internet. For example, a customer can use the Customer Web Portal to implement risk management at the client level. The API exposes this same functionality in a programmatic way allowing customers to write programs to automate these tasks. You could, for example, use the API to limit the max share size allowed on all orders for a particular client.

This API is available for use on all US platforms that use the Cboe technology platform. Cboe reserves the right to add services to this API at any time without notice.

1.2 Requirements

Secure services:

- An API Developer Key
- An API Developer Secret (Customer Portal Password)
- Ability to send HTTPS requests and receive HTTPS responses over the Internet

1.3 Access

The API is accessed via a URL using the HTTPS protocol. The API is served from the api.batstrading.com domain.

```
BYX Exchange
https://api.batstrading.com/byx/service/
BZX Exchange
https://api.batstrading.com/bzx/service/
EDGX Exchange
https://api.batstrading.com/edgx/service/
EDGA Exchange
https://api.batstrading.com/edga/service/
BZX Options Exchange
https://api.batstrading.com/opt/service/
Cboe Options Exchange
https://api.batstrading.com/cone/service/
C2 Options Exchange
https://api.batstrading.com/ctwo/service/
EDGX Options Exchange
https://api.batstrading.com/exo/service/
Cboe Futures Exchange
https://api.batstrading.com/cfe/service/
```

Where ***service*** is the path to a particular service you want to reach. The available services are detailed later in this document.

1.3.1 Obtaining a Developer Key and Secret

Contact the Cboe or CFE Trade Desk to receive your API Developer Key. The API Developer Secret is the Customer Web Portal password associated with the account. Never share your Secret with anyone. Cboe employees will never ask you for your Secret.

1.3.2 Certification Environments

Features of the API services are available for testing in certification environments. Members are encouraged to test updates and new features in the certification environments prior to usage in production environments. You can request logical port sessions in the certification environment through the Logical Port Request tool. See the US Customer Web Portal Specification for more information on the Logical Port Request tool.

Certification Environment URLs

```
BYX Exchange
https://api.certification.batstrading.com/byx/service/
BZX Exchange
https://api.certification.batstrading.com/bzx/service/
EDGX Exchange
https://api.certification.batstrading.com/edgx/service/
EDGA Exchange
https://api.certification.batstrading.com/edga/service/
```

```
Cboe Options Exchange
https://api.certification.batstrading.com/cone/service/

BZX Options Exchange
https://api.certification.batstrading.com/opt/service/

C2 Options Exchange
https://api.certification.batstrading.com/ctwo/service/

EDGX Options Exchange
https://api.certification.batstrading.com/exo/service/
```

```
Cboe Futures Exchange
https://api.certification.batstrading.com/cfe/service/
```

2 Request Structure

Requests that retrieve data without making any modifications can be made using an HTTP GET. Requests that are expected to modify data must use an HTTP POST. Each service may have several commands available. Each command may have unique parameter requirements and so are specified per service and command. ***You need to submit your key and secret on every request.***

Example Request

For example, one of the services exposed via the API is the Port Control service. One of the commands available in this service is "viewClient". Since this command does not modify anything, you could use a GET.

```
BZX Service URL: https://api.batstrading.com/bzx/account/port_controls/
Method: GET
Required request parameters:
          key: "dtiyt6VkQ1e3sFNgvuCaiA"
          secret: "MyPassword"
          command: "viewClient"
          client: "ABCD"
```

Since this example is a GET, the API request could be made using this URL:

```
https://api.batstrading.com/bzx/account/port_controls/?key=dtiyt6VkQ1e3s
FNgvuCaiA&secret=MyPassword&command=viewClient&client=ABCD
```

3 Response Structure

The response will be in JSON format. There are some key-value pairs that you can always expect while other keys will optionally exist. In the table below, the optional fields are shown in *italic*.

Additional key-value pairs and data items could be added. You should develop your application in such a way that it will not break if new items are added in the response. Do not rely on key position when parsing the response.

Field	Description
code	Request result code. 200 series = Success. Non 200 series = Failure. See ‘msg’ value for details. The request may have been partially successful.
Msg	A string description of the success or failure. Usually only populated when code is not 200.
Data	A list of data items. The exact format is specific to the command requested.

Example Response Structure

```
{
  "code":"200",
   "msg": "",
  "data":[{"Color":"green","Size":12},{"Color":"blue","Size":9}]
}
```

4 US Equities Services

Services available through the US Secure Web API for the BYX, BZX, EDGA, and EDGX Equities Exchanges operated by Cboe.

Name	Section	Path	Description
Port Controls	4.1	/account/port_controls/	Used by Customers and Service Bureaus to manage their ports and default port settings.
Market Maker	4.2	/account/market_maker/	Used by Registered Market Makers to register symbols for automated quotation.
Liquidity Management Provider	4.3	/account/liquidity_management_provider/	Used to register as a Liquidity Management Provider for a list of symbols.
Risk Manager	4.4	/account/risk_manager/	Used to view and manage risk rules.
Ports Info	4.5	/account/ports_info/	Ports information service.
Symbol Data	4.6	/account/symbol_data/	Near-real-time top of book data for reference use or distribution.
Top	4.7	/account/top/	Used to retrieve current top-of-book symbol data for all equity symbols
Book Data	4.8	/account/book/	Near-real-time depth of book data for reference use or distribution.

4.1 Port Controls Service

Service URL

```
BYX Exchange
https://api.batstrading.com/byx/account/port_controls/

BZX Exchange
https://api.batstrading.com/bzx/account/port_controls/

EDGX Exchange
https://api.batstrading.com/edgx/account/port_controls/

EDGA Exchange
https://api.batstrading.com/edga/account/port_controls/
```

4.1.1 viewClients

Use this command to retrieve a list of your configured clients and their associated clearing identifier.

Parameter	Description
command	**viewClients**

Example Response

```
{‘code’: ‘200’, ‘msg’: ‘’,
 ‘data’: [{
      'display': ‘FIRM/MMMM: Your Firm (direct using MMMM)',
      'client': 'FIRM', ‘firm_name': ‘Your Firm', 'clearing': 'MMMM',
   }, [{
      'display': 'SPON/MMMM: Sponsored Firm (sponsored using MMMM)',
      'client': 'SPON', 'firm_name': 'Sponsored Firm', 'clearing': 'MMMM',
   }]}
```

4.1.2 viewClient

Use this command to retrieve current default settings for all of your firm’s ports. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**viewClient**
client	Customer or Service Bureau’s Cboe Firm ID
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "data":[ {"allowShortSales":"0", "maxShareSize":999999,
"maxNotionalValue":0, "allowPostmarket":"0", "allowIso":"1",
"blockNewOrders":"0", "allowPremarket":"0", ”executionCollar1”:”50”,
“executionCollar2”:”25”, “executionCollar3”:”15”,
“executionCollar4”:”10”, “executionCollar5”:”10”,
”dailyLimitCutoff”:”100000000”, ”dailyLimitNetCutoff”:”100000000”,
“dailyMktCutoff”:”100000000”, “dailyMktNetCutoff”:”100000000”,
“dupOrderAction”:”R”, “dupOrderCount”:”1000”, “dupOrderSeconds”:”5”} ]}
```

4.1.3 setClient

Use this command to update default settings for all of your firm's ports. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**setClient**
client	Customer or Service Bureau's Cboe Firm ID
allowIso	0=restrict, 1=allow
allowDirectedIso	0=restrict, 1=allow
allowShortSales	0=restrict, 1=allow
allowShortSaleExempt	0=restrict, 1=allow
requireLocateBrokerOnShortSaleOrders	0=no, 1=yes
requireLocateBrokerOnShortSaleExemptOrders	0=no, 1=yes
allowPremarket	0=restrict, 1=allow
allowPostMarket	0=restrict, 1=allow
blockNewOrders	0=do not block, 1=block
cancelOpenOrders	0=do not cancel, 1=cancel
advPercent	Percent of ADV for Single Order ADV Checks. An integer from 1 to 100.
advMinThreshold	Enable when ADV Exceeds (shares), i.e. the Minimum Threshold for Single Order ADV Checks. An integer greater than 0.
maxNotionalValue	0=use default max notional
maxShareSize	0=use default max size
portThreshold	An integer from 1 to 5000.
symbolThreshold	An integer from 1 to 5000.
executionCollar1	Fat Finger % Tier 1 (< $1)** An integer from 1 to 75.
executionCollar2	Fat Finger % Tier 2 (>= $1 and < $10)** An integer from 1 to 50.
executionCollar3	Fat Finger % Tier 3 (>= $10 and < $50)** An integer from 1 to 20.
executionCollar4	Fat Finger % Tier 4 (>= $50 and < $100)** An integer from 1 to 20.
executionCollar5	Fat Finger % Tier 5 (>= $100 and < $500)** An integer from 1 to 20.

executionCollar6	Fat Finger % Tier 6 (>= $500)** An integer from 1 to 20.
executionCollarDollar1	Fat Finger Dollar Tier 1 (< $1)**
executionCollarDollar2	Fat Finger Dollar Tier 2 (>= $1 and < $10)**
executionCollarDollar3	Fat Finger Dollar Tier 3 (>= $10 and < $50)**
executionCollarDollar4	Fat Finger Dollar Tier 4 (>= $50 and < $100)**
executionCollarDollar5	Fat Finger Dollar Tier 5 (>= $100 and < $500)**
rejectMktNoNbbo	0=do not reject, 1=reject
dailyLimitCutoff	Gross Daily Limit Order Notional Cutoff Value ($)** An integer between 1 and 1,000,000,000.
dailyLimitWarnPct	Gross Daily Limit Order Warning Percentage** An integer between 1 and 100.
dailyLimitNetCutoff	Net Daily Limit Order Notional Cutoff Value ($)** An integer between 1 and 1,000,000,000.
dailyLimitNetWarnPct	Net Daily Limit Order Warning Percentage** An integer between 1 and 100.
dailyMktCutoff	Gross Daily Market Order Notional Cutoff ($)** An integer between 1 and 1,000,000,000.
dailyMktWarnPct	Gross Daily Market Order Warning Percentage** An integer between 1 and 100.
dailyMktNetCutoff	Net Daily Market Order Notional Cutoff ($)** An integer between 1 and 1,000,000,000.
dailyMktNetWarnPct	Net Daily Market Order Warning Percentage** An integer between 1 and 100.
dailyLimitEmails	A CSV formatted list of email addresses that will receive a notification when an Aggregated Credit Limit Warning Percent threshold is breached.
dupOrderAction	Action When Duplicative Orders are Encountered: O=Off (no action), R=Reject Orders, D=Disable Port Note the key for duplicative order checks are: Clearing MPID, Symbol, Price, Size and Side (i.e. Buy or not)
dupOrderCount	Order Count Threshold
dupOrderSeconds	Time Threshold in seconds
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

marketOrderRestriction	1=Allow MKT orders, 2=Reject MKT orders during continuous trading and allow during auctions, 3=Reject MKT orders during continuous trading and also during auctions

**Optional parameters in italic. Note that at least one of the optional parameters must be specified. You may supply one or multiple optional parameters in a single request.*
*** Refer to the Cboe Web Portal Port Controls Specification for more information on this parameter.*

Example Response

```
{"code":"200", "msg":""}
```

4.1.4 viewEasy

Use this command to view the Easy to Borrow list for your firm. Firms cannot have both the Easy to Borrow list and Hard to Borrow list in place at the same time for order management. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**viewEasy**
client	Customer or Service Bureau's Cboe Firm ID
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{“code”:”200”, “msg”:””, “data”: {“known”: [“symbol1”, “symbol2”,
“symbol3”], “unknown”: [],”knownCount”: 3, “unknownCount”: 0}}
```

4.1.5 uploadEasy

Use this command to change the Easy to Borrow list for your firm. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**uploadEasy**
client	Customer or Service Bureau's Cboe Firm ID
symbols	Comma separated list of Cboe symbol names
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "msg": "5 valid symbols were applied. Of these, 1 are not
known to the Cboe trading system. Perhaps they will be known in the
future. ", "data": {"knownCount": 4, "unknownCount": 1, "unknown":
["FOOO"], "invalidCount": 0, "invalid": []}}
```

4.1.6 removeEasy

Use this command to remove the Easy to Borrow list for your firm. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**removeEasy**
client	Customer or Service Bureau's Cboe Firm ID
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "msg": ""}
```

4.1.7 viewHard

Use this command to view the Hard to Borrow list for your firm. Firms cannot have both the Hard to Borrow list and Easy to Borrow list in place at the same time for order management. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**viewHard**
Client	Customer or Service Bureau's Cboe Firm ID
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "msg":"", "data": {"known": ["symbol1", "symbol2",
"symbol3"], "unknown": [],"knownCount": 3, "unknownCount": 0}}
```

4.1.8 uploadHard

Use this command to change the Hard to Borrow list for your firm. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**uploadHard**
Client	Customer or Service Bureau's Cboe Firm ID

symbols	Comma separated list of Cboe symbol names
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "msg": "5 valid symbols were applied. Of these, 1 are not
known to the Cboe trading system. Perhaps they will be known in the
future. ", "data": {"knownCount": 4, "unknownCount": 1, "unknown":
["FOOO"], "invalidCount": 0, "invalid": []}}
```

4.1.9 removeHard

Use this command to remove the Hard to Borrow list for your firm. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**removeHard**
Client	Customer or Service Bureau's Cboe Firm ID
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "msg": ""}
```

4.1.10 viewRestricted

Use this command to view the Restricted Symbols list for your firm. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**viewRestricted**
client	Customer or Service Bureau's Cboe Firm ID
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "msg":"", "data": {"known": ["symbol1", "symbol2", "symbol3" ], "unknown": [],"knownCount": 3, "unknownCount": 0}}
```

4.1.11 uploadRestricted

Use this command to change the Restricted Symbols list for your firm. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**uploadRestricted**
client	Customer or Service Bureau's Cboe Firm ID
symbols	Comma separated list of Cboe symbol names
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "msg": "5 valid symbols were applied. Of these, 1 are not known to the Cboe trading system. Perhaps they will be known in the future. ", "data": {"knownCount": 4, "unknownCount": 1, "unknown": ["FOOO"], "invalidCount": 0, "invalid": []}}
```

4.1.12 removeRestricted

Use this command to remove the Restricted Symbols list for your firm. Customers and Service Bureaus must specify their four character Cboe Firm ID.

Parameter	Description
command	**removeRestricted**
client	Customer or Service Bureau's Cboe Firm ID
clearing	The MPID used in the relationship (required when multiple MPIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "msg": ""}
```

4.2 Market Maker Registration Service

Service URL

```
BYX Exchange
https://api.batstrading.com/byx/account/market_maker/

BZX Exchange
https://api.batstrading.com/bzx/account/market_maker/

EDGX Exchange
https://api.batstrading.com/edgx/account/market_maker/

EDGA Exchange
https://api.batstrading.com/edga/account/market_maker/
```

4.2.1 viewIdentifiers

View all available clearing firm identifiers.

Parameter	Description
command	**viewIdentifiers**

Example Response

```
{"code":"200",
 "data":[
     {"identifier":"CBOE"},
     {"identifier":"MMQA"},
     {"identifier":"MMQB"}
 ],
"msg":"","}
```

4.2.2 viewRegisteredSymbols

View symbols registered for both the current trading session and the next trading session.

Parameter	Description
command	**viewRegisteredSymbols**
identifier	The clearing firm identifier to view

Example Response

```
{"code":"200",
 "data":{
     "current":["ZVZZT"],
     "next":["ZVZZT"]
 }
 "msg":"",
}
```

4.2.3 viewActiveRegisteredSymbols

View active symbols registered for both the current trading session and the next trading session.

Parameter	Description
command	**viewActiveRegisteredSymbols**
identifier	The clearing firm identifier to view

Example Response

```
{"code":"200",
 "data":{
     "current":["ZVZZT"],
     "next":["ZVZZT"]
 }
 "msg":"",
}
```

Note that the “current” and “next” lists represent registered symbols in an active state at the time the command is run.

4.2.4 clearRegisteredSymbols

Remove all currently-registered symbols.

Parameter	Description
command	**clearRegisteredSymbols**
identifier	The clearing firm identifier to clear

Example Response

```
{"code":"200", "msg":"INFO: Successfully removed all symbols"}
```

4.2.5 uploadRegisteredSymbols

Register a new set of symbols for automated quoting.

Parameter	Description
command	**uploadRegisteredSymbols**
identifier	The clearing firm identifier to clear
add	Comma-separated list of symbols to register for the next trading session.
remove	Comma-separated list of symbols to remove for the next trading session.

Example Request

```
?command=uploadRegisteredSymbols&identifier=CBOE&add=ZVZZT,ZBZX,ZTEST
```

Example Response

```
{"code":"200"
 "msg":"List updated. Registration in the securities referenced in your update will be effective on January 12, 2016",
 "data":{
     "inactiveCount":0,
     "duplicateCount":0,
     "activeCount":3,
     "removeCount":0,
     "unknownList":[],
     "addCount":3,
     "failedMinimumRegistration":[]
 }
}
```

4.3 Liquidity Management Provider Registration Service (BZX Only)

Service URL

```
BZX Exchange
https://api.batstrading.com/bzx/account/liquidity_management_provider/
```

4.3.1 viewIdentifiers

View all available clearing firm identifiers.

Parameter	Description
command	**viewIdentifiers**

Example Response

```
{"code":"200",
 "data":[
     {"identifier":"CBOE"},
     {"identifier":"MMQA"},
     {"identifier":"MMQB"}
 ],
"msg":"","}
```

4.3.2 viewRegisteredSymbols

View LMP symbols registered for both the current trading session and the next trading session.

Parameter	Description
command	**viewRegisteredSymbols**
identifier	The clearing firm identifier to view

Example Response

```
{"code":"200",
 "data":{
     "current":["ZVZZT"],
     "next":["ZVZZT"]
 }
 "msg":"",
}
```

4.3.3 viewActiveRegisteredSymbols

View active LMP symbols registered for both the current trading session and the next trading session.

Parameter	Description
command	**viewActiveRegisteredSymbols**
identifier	The clearing firm identifier to view

Example Response

```
{"code":"200",
 "data":{
     "current":["ZVZZT"],
     "next":["ZVZZT"]
 }
 "msg":"",
}
```

Note that the “current” and “next” lists represent registered symbols in an active state at the time the command is run.

4.3.4 clearRegisteredSymbols

Remove all currently-registered LMP symbols.

Parameter	Description
command	**clearRegisteredSymbols**
identifier	The clearing firm identifier to clear

Example Response

```
{"code":"200", "msg":"INFO: Successfully removed all symbols"}
```

4.3.5 uploadRegisteredSymbols

Register a new set of symbols for the LMP program.

Parameter	Description
command	**uploadRegisteredSymbols**
identifier	The clearing firm identifier to clear
add	Comma-separated list of symbols to register for the next trading session.
remove	Comma-separated list of symbols to remove for the next trading session.

Example Request

```
?command=uploadRegisteredSymbols&identifier=CBOE&add=ZVZZT,ZBZX,ZTEST
```

Example Response

```
{"code":"200"
 "msg":"List updated. Registration in the securities referenced in your
update     will     be     effective     on     January     12,     2016",
 "data":{
     "inactiveCount":0,
     "duplicateCount":0,
     "activeCount":3,
     "removeCount":0,
     "unknownList":[],
     "addCount":3,
     "failedMinimumRegistration":[]
 }
}
```

4.4 Risk Management Service

Service URL

BYX Exchange
https://api.batstrading.com/byx/account/risk_manager/

BZX Exchange
https://api.batstrading.com/bzx/account/risk_manager/

EDGX Exchange
https://api.batstrading.com/edgx/account/risk_manager/

EDGA Exchange
https://api.batstrading.com/edga/account/risk_manager/

4.4.1 viewExecutingFirms

View available executing firm ID's.

Parameter	Description
Command	**viewExecutingFirms**

Example Response

```
{
  "msg":"",
  "code":"200",
  "data":{
          “CBOE”:{
          “clearingId”:“CBOE”,
          “clearingFirmName”:“Clearing Firm”,
          “firmname”:“Firm Name”,
          “controlledBy”:“trading”
          “risk_group_id”:”123”}
          }
}
```

4.4.2 viewRules

View all rules stored for an executing firm ID.

Parameter	Description
command	**viewRules**
identifier	Executing Firm ID*
tradingDay (OPTIONAL)	Pass `today` to view rules for the current trading date. Defaults to next trading date.

*If no `identifier` is provided, all rules for the firms' MPIDs will be returned.

Example Response

```
{
  "msg":"",
  "code":"200",
  "data":[
          {"symbol":"",
          "limit_value":999999999,
          "limit_type":"abs_ntnl",
          "market_participant_id":"CBOE"
          “risk_group_id”:”0”}
          ]
}
```

4.4.3 uploadRules

Upload a rule set for the next trading day.

Parameter	Description
command	**uploadRules**
identifier	Executing Firm ID
rules	Comma-delimited list of rules to add

Rule Format:

Colon-separated list of values as follows:

```
mpid:limit_type:symbol:limit_value:risk_group_id
```

- `mpid` – This field specifices the MPID to which the risk setting applies. A valid MPID must be included and the firm must have control of the MPID.
- `limit_type` – The limit type must be one of the following values:
    - `abs_ntnl` – Absolute Gross Notional
    - `abs__nntnl` – Absolute Net Notional
- `symbol` – Not supported. Must be blank.
- `limit_value` – This value must be an interger value. Floating point values are not accepted. When the limit type is a notional type, this represents whole dollars.
- `risk_group_id – Optional field, integer 1-65535.`

Example Request

```
rules=CBOE:abs_ntnl::1000000000,CBGM:abs_nntnl::1000000
```

Example Response

```
{
  "msg":"Rules updated",
  "code":"200",
  "data":{
          "duplicateCount":0,
          "removeCount":2,
          "processedCount":2,
          "spacesCount":0,
          "efidsInUpload":[
               “CBOE”,
               “MORN”,],
          "unknownList":[],
          "addCount":2}
}
```

4.4.4 clearRules

Remove all currently-stored rules, effective starting the next trading day.

Parameter	Description
command	**clearRules**
identifier	The Executing Firm ID to clear, or `all` to clear rules for all executing firm IDs.

Example Response

```
{"msg":"","code":"200","data":[]}
```

4.5 Ports Information Service

Service URL

```
BYX Exchange
https://api.batstrading.com/byx/account/ports_info/
BZX Exchange
https://api.batstrading.com/bzx/account/ports_info/
EDGX Exchange
https://api.batstrading.com/edgx/account/ports_info/
EDGA Exchange
https://api.batstrading.com/edga/account/ports_info/
```

4.5.1 viewPortConnections

Use this command to retrieve CSV formatted data of your ports and their associated connection information. The data will reflect the same information presented in the 'View Port Connection Info' available under the More Options link in the Customer Web Portal Ports Dashboard and is subject to change. Each port type will have its own header row and a blank line will be inserted between port types.

Parameter	Description
command	**viewPortConnections**

Example Response

```
"Type","Primary IP (SECAUCUS)","Secondary IP (CHICAGO)","Port","Username","Session Sub Id","Password","Trading Group","Allowed MPIDs"
"BOE","127.0.0.1","127.0.0.2","10100","CBOE","0001","bz1cboe","","CBOE"

4.5.2 viewPortAttributes

Use this command to retrieve CSV formatted data of your order handler ports and their associated attribute information. The data will reflect the same information presented in the 'View Port Attributes Info' available under the More Options link in the Customer Web Portal Ports Dashboard and is subject to change. Each port type will have its own header row and a blank line will be inserted between port types. The attribute label is given in the leftmost column, with the right-side columns showing the setting for each port (IP Port values given in the header row). The firm name will also be presented in the header row along with the port type.

Parameter	Description
command	**viewPortAttributes**

4.6 Symbol Data

Service URL

BYX Exchange
https://api.batstrading.com/byx/account/symbol_data/

BZX Exchange
https://api.batstrading.com/bzx/account/symbol_data/

EDGX Exchange
https://api.batstrading.com/edgx/account/symbol_data/

EDGA Exchange
https://api.batstrading.com/edga/account/symbol_data/

Use this API to retrieve current top-of-book symbol data for all US equity symbols on the selected exchange. The data will be returned in an XML format.

API requests for symbol data should be sent not more than once per 30-second period. More frequent requests will not provide more frequent updates.

Example Response

```
<cboe>
<stats vol="12345" orders="23456"/>
<symbols timestamp="2015-09-08 09:30:00" count="1111">
<symbol name="FOO" vol="11111" asksz="0" askpx="0.0" bidsz="0" bidpx="0.0" last="142.85" matched="123" routed="234"/>
<symbol name="BAR" vol="22222" asksz="0" askpx="0.0" bidsz="0" bidpx="0.0" last="29.95" matched="234" routed="345"/>
</symbols>
</cboe>
```

4.7 EDGX/BZX Top-of-Book (REST/JSON)

Service URL

```
EDGX Exchange
https://api.batstrading.com/edgx/account/top/

BZX Exchange
https://api.batstrading.com/bzx/account/top/
```

Use this API to retrieve current top-of-book symbol data for all equity symbols. The data will be returned in a JSON format.

API requests for symbol data should be sent not more than once per second. More frequent requests will not provide more frequent updates.

Example Response

```
{
    "updateTime":"2017-08-30T17:10:18-04:00",
    "data":[{
        "volume":960681,
        "bidPrice":0.0,
        "name":"SPY",
        "lastPrice":245.96,
        "askSize":0,
        "bidSize":0,
        "askPrice":0.0,
        "routed":400,
        "matched":960281}]
}
```

4.8 Book Data

Service URL

```
BYX Exchange
https://api.batstrading.com/byx/account/book/<symbol>/data/

BZX Exchange
https://api.batstrading.com/bzx/account/book/<symbol>/data/

EDGX Exchange
https://api.batstrading.com/edgx/account/book/<symbol>/data/

EDGA Exchange
https://api.batstrading.com/edga/account/book/<symbol>/data/
```

View current depth-of-book data for the selected symbol on the selected exchange.

API requests for book data should be sent not more than once per 5-second period. More frequent requests will not provide more frequent data updates.

Example Response

```
{"status":"200:                                                        ",

5 US Options Services

Services available through the Secure Web API for C1, BZX, EDGX, and C2 Options Exchanges.

Name	Section	Path	Description
Port Controls	5.1	/account/port_controls/	Used by Customers and Service Bureaus to manage their ports and default port settings.
Market Maker	5.2	/account/optmarket_maker/	Used by Registered Market Makers to register symbols for automated quotation.
Risk Management	5.3	/account/risk_manager/	Used by Options Customers to manage the risk of over-execution.
Ports Information Service	5.4	/account/ports_info/	Used by Options Customers to receive configuration information about their ports.
Clearing Edit Service	5.5	/account/clearing_edits/	Used by Options Customers to make post-trade corrections to their options executions

5.1 Port Controls

Service URL

```
Cboe Options Exchange
https://api.batstrading.com/cone/account/port_controls/

BZX Options Exchange
https://api.batstrading.com/opt/account/port_controls/

C2 Options Exchange
https://api.batstrading.com/ctwo/account/port_controls/

EDGX Options Exchange
https://api.batstrading.com/exo/account/port_controls/
```

5.1.1 viewClient

Use this command to retrieve current default settings for all of your firm's ports. Customers and Service Bureaus must specify their four-character Cboe Firm ID.

Parameter	Description
command	**viewClient**
client	Customer or Service Bureau's Cboe Firm ID

clearing	The Executing Firm ID (EFID) used in the relationship (required when multiple EFIDs are in use)

**Optional parameters in italic.*

Example Response

```
{"code":"200", "data":[ {"maxShareSize":999999, "maxNotionalValue":0,
"allowIso":"1", "blockNewOrders":"0", ”executionCollar1”:”50”,
“executionCollar2”:”25”, “executionCollar3”:”15”,

dupOrderAction	Action When Duplicative Orders are Encountered: O=Off (no action), R=Reject Orders, D=Disable Port Note the key for duplicative order checks are: Clearing EFID, Symbol, Price, Size and Side (i.e. Buy or not)
dupOrderCount	Order Count Threshold
dupOrderSeconds	Time Threshold in seconds
Clearing	The EFID used in the relationship (required when multiple EFIDs are in use)

**Optional parameters in italic. Note that at least one of the optional parameters must be specified. You may supply one or multiple optional parameters in a single request.*
*** Refer to the Web Portal Port Controls Specification for more information on this parameter.*

Example Response

```
{"code":"200", "msg":""}
```

5.2 Market Maker Registration Service

Service URL

```
BZX Options Exchange
https://api.batstrading.com/opt/account/optmarket_maker/
Cboe Options Exchange
https://api.batstrading.com/cone/account/optmarket_maker/
C2 Options Exchange
https://api.batstrading.com/ctwo/account/optmarket_maker/
EDGX Options Exchange
https://api.batstrading.com/exo/account/optmarket_maker/
```

5.2.1 viewSeriesStatus

View status information on all currently-registered series.

Parameter	Description
command	**viewSeriesStatus**
identifier	Market marker ID
tradingDay (OPTIONAL)	View series status for current trading day or next trading day. Valid values are `today` or `next_trading_day`. Defaults to `today` if not supplied.

Example Response

```
{
    "msg": "",
    "code": "200",
    "data": {
        "underlying": {
            "MMQA": {
                "count": 8,
                "regType": 0,
                "underlying": "P"
            }
        },
        "upload_list": {
            "MMQA": "2012-06-29 13:30:09.212097"
        },
        "series_count": {
            "MMQA":"8"
        }
    }
}
```

5.2.2 viewRegisteredSeries

View series registered for both the current trading session and the next trading session.

Parameter	Description
command	**viewRegisteredSeries**
identifier	Market Maker ID
dt (OPTIONAL)	View series registered for the selected date, in YYYY-MM-DD format. Defaults to current date if not supplied.

Example Response

```
{"msg":"",
 "code":"200",
 "data":[
    {"strike_price":10.000,
     "bats_symbol":"000333",
     "expiration_date":"3006-01-01",
     "osi_symbol":"A                                  060101P00010000",
     "put_call_flag":"P",
     "underlying":"A"},

    {"strike_price":10.000,
     "bats_symbol":"000111",
     "expiration_date":"3006-01-01",
     "osi_symbol":"A                                  060101C00010000",
     "put_call_flag":"C",
     "underlying":"A"}
 ]
}
```

5.2.3 storeSeriesList

Upload a series definition in a selected symbology format.

Parameter	Description
command	**storeSeriesList**
identifier	Market Maker ID
series	Comma-delimited list of underlying symbols.
mode [OPTIONAL]	Valid values are: `replace` (default), `add`, `remove`

Example Responses

C1/EDGX Options

```
{
    "msg": "Series list updated: Expired 0 series, Added 32 series",
    "code": "200",
    "data": {
        "upload_list": {
            "MMQA": "2012-06-30 15:08:54.685734"
        },
        "risk": "Your new registrations will increase your appointment fees from $1.99 to $2.00. This
        will increase your fee this month (effective 11/25/23).",
        "state": 1,
        "series_count": {
            "MMQA": "2"
        },
        "underlying": {
            "MMQA": [{
                "count": 2,
                "regType": 0,
                "underlying": "A"
            }]
        }
    }
}
```

C2 Options/BZX Options

```
{
  "msg": "Series list updated: Expired 0 series, Added 32 series",
  "code": "200",
  "data": {
    "upload_list": {
      "MMQA": "2012-06-30 15:08:54.685734"
    },
    "state": 1,
    "series_count": {
      "MMQA": "2"
    },
    "underlying": {
      "MMQA": [{
        "count": 2,
        "regType": 0,
        "underlying": "A"
      }]
    }
  }
}
```

5.2.4 clearAllSeries

Remove all currently-registered series.

Parameter	Description
command	**clearAllSeries**
identifier	Market Maker ID

Example Response

```
{"msg":"All series expired","code":"200","data":[]}
```

5.2.5 removeSymbol

Remove all registered series for a specific underlying symbol.

Parameter	Description
command	**removeSymbol**
identifier	Market Maker ID
symbol	Underlying symbol to remove

Example Response

```
{"msg":"Underlying symbol list updated: Added 0 underlying symbols,
expired 1 underlying symbols",
 "code":"200",
 "data":[]
}
```

5.3 Risk Management Service

Service URL

```
Cboe Options Exchange
https://api.batstrading.com/cone/account/risk_manager/

BZX Options Exchange
https://api.batstrading.com/opt/account/risk_manager/

C2 Options Exchange
https://api.batstrading.com/ctwo/account/risk_manager/

EDGX Options Exchange
https://api.batstrading.com/exo/account/risk_manager/
```

5.3.1 viewExecutingFirms

View available executing firm ID’s.

Parameter	Description
command	**viewExecutingFirms**

Example Response

```
{"msg":"Success",
 "code":"200",
 "data":[{"executingFirmId":"CBOE"}]
}
```

5.3.2 viewRules

View all rules stored for an individual trading session.

Parameter	Description
command	**viewRules**
identifier	Executing Firm ID
tradingDay (OPTIONAL)	Pass `today` to view rules for the current trading date. Defaults to next trading date.

Example Response

Note that risk_group_type is only returned for C1, C2, and EDGX Options. C2 Options and EDGX Options only support a risk_group_type value = 'default'..

```
{
    "msg":"",
    "code":"200",
    "data":[
       {"risk_group_type":"default",
        "efid_level_limit":"F",
        "limit_value":1000000,
        "millis":1000,
        "limit_type":"rate_ntnl",
        "risk_root":"XSP",
        "executing_firm_id":"CBOE”},
       {"risk_group_type":"gth",
        "efid_level_limit":"F",
        "limit_value":500000,
        "millis":1000,
        "limit_type":"rate_ntnl",
        "risk_root":"XSP",
        "executing_firm_id":"CBOE"},
       {"risk_group_type":"default",
        "efid_level_limit":"F",
        "limit_value":1000000,
        "millis":1000,
        "limit_type":"rate_ntnl",
        "risk_root":"QQQ",
        "executing_firm_id":"CBOE"},
       {"risk_group_type":"default",
        "efid_level_limit":"F",
        "limit_value":1000000,
        "millis":1000,
        "limit_type":"rate_ntnl",
        "risk_root":"IWM",
        "executing_firm_id":"CBOE"}
    ]
   }
```

5.3.3 uploadRules

Upload a rule set for the next trading session. Uploads executed before 9 a.m. ET may be applied during the same date. See the **uploadRules Application in Trading Session** table below for more details.

Parameter	Description
command	**uploadRules**
identifier	Executing Firm ID
rules	Comma-delimited list of rules to add

Rule Format:

Colon-separated list of values as follows:

```
firm_id:limit_type:risk_root:limit_value:millis:efid_level_limit:
risk_group_type*
```

**Note that risk_group_type is only returned for C1, C2, and EDGX Options. C2 Options and EDGX Options only support a risk_group_type value = 'default'.*

Example Request

```
rules=CBOE:rate_ntnl:XSP:1000000:1000:F:default,CBOE:rate_ntnl:XS
P:1000000:1000:F:gth,CBOE:rate_ntnl:QQQ:1000000:1000:F:default,CB
OE:rate_ntnl:IWM:1000000:1000:F:default
```

Example Response

```
{
  "msg":"Rules updated",
  "code":"200",
  "data":{
          "duplicateCount":0,
          "removeCount":4,
          "processedCount":4,
          "unknownList":[],
          "spacesCount":0,
          "addCount":4}
}
```

uploadRules Application in Trading Session

GTH Cutoff Cboe Options = 7:45 p.m. ET
RTH Cutoff (all markets) = 9:00 a.m. ET
Curb Cutoff Cboe Options = 4:00 p.m. ET

Market	Time of Upload	Type of Rule	How Uploaded Rule is Applied
BZX Options, C2 Options, EDGX Options	Before RTH Cutoff	Default Rule	Applies same date
	After RTH Cutoff (or on a non-trading date)		Applies next trading date
Cboe Options	Before GTH/Curb Cutoff	GTH Rule	Applies same date during GTH
		Curb Rule	Applies same date during Curb
		Default Rule	Applies same date during GTH/Curb and RTH
		SOQ Rule	Applies same date during SOQ
	After GTH/Curb Cutoff but before RTH Cutoff	GTH Rule	Applies next trading date during GTH
		Curb Rule	Applies same date during Curb
		Default Rule	Applies same date during RTH
		SOQ Rule	Applies same date during SOQ
	After RTH Cutoff (or on a non-trading date)	GTH Rule	Applies next trading date during GTH
		Curb Rule	Applies same date during Curb
		Default Rule	Applies next trading date
		SOQ Rule	Applies next trading date

5.3.4 clearRules

Remove all currently-stored rules.

Parameter	Description
command	**clearRules**
identifier	The Executing Firm ID to clear, or `all` to clear rules for all executing firm IDs.

Example Response

```
{"msg":"","code":"200","data":[]}
```

5.4 Ports Information Service

Service URL

```
Cboe Options Exchange
https://api.batstrading.com/cone/account/ports_info/
BZX Options Exchange
https://api.batstrading.com/opt/account/ports_info/
C2 Exchange
https://api.batstrading.com/ctwo/account/ports_info/
EDGX Options Exchange
https://api.batstrading.com/exo/account/ports_info/
```

5.4.1 viewPortConnections

Use this command to retrieve CSV formatted data of your ports and their associated connection information. The data will reflect the same information presented in the 'View Port Connection Info' available under the More Options link in the Customer Web Portal Ports Dashboard and is subject to change. Each port type will have its own header row and a blank line will be inserted between port types.

Parameter	Description
command	**viewPortConnections**

Example Response

```

5.4.2 viewPortAttributes

Use this command to retrieve CSV formatted data of your order handler ports and their associated attribute information. The data will reflect the same information presented in the ‘View Port Attributes Info’ available under the More Options link in the Customer Web Portal Ports Dashboard and is subject to change. Each port type will have its own header row and a blank line will be inserted between port types. The attribute label is given in the leftmost column, with the right-side columns showing the setting for each port (IP Port values given in the header row). The firm name will also be presented in the header row along with the port type.

Parameter	Description
command	**viewPortAttributes**

Example Response

```

5.5 Clearing Edit Service

Used to make post-trade edits to options trades. This service automates the activities that can be performed through the Customer Web Portal Clearing Editor.

Service URL

```
Cboe Options Exchange
https://api.batstrading.com/cone/account/clearing_edits/

BZX Options Exchange
https://api.batstrading.com/opt/account/clearing_edits/

C2 Options Exchange
https://api.batstrading.com/ctwo/account/clearing_edits/

EDGX Options Exchange
https://api.batstrading.com/exo/account/clearing_edits/
```

5.5.1 viewTrades

Use this command to retrieve trade details. The response will provide the order_id, exec_id, item and other fields to help identify which executed trades to modify when using the addToQueue command. Note that even though an executed trade may show in the response, it may not be available for modification. For example, if a trade has been modified but not submitted to the OCC, the trade will not be eligible for modification until the OCC submission has been completed.

A response to viewTrades is limited to 50 trade records. The following table describes the filters that can be added to the viewTrades command in order to reduce the number of trades returned in the response.

Parameter	Description
command	**viewTrades**
account	
call_put_flag	Valid values include the following. C = Call P = Put
capacity	The capacity for the order. C = Customer * F = Firm

	M = Market Maker U = Professional Customer N = Away Market Maker B = Broker-Dealer J = Joint Back Office L = Non-TPH Affiliate (C1 and C2 only) Any edit of the capacity value of 'C' to another value must supply a valid value in the reason_code parameter.
cl_order_id (C1 only)	ID chosen by client, 20 characters or less. Characters in ASCII range 33-126 are allowed, except for comma, semicolon, and pipe
clearing_account	Referred to as **Sub Account** in GUI.
clearing_firm	The EFID used in the relationship. Referred to as **Broker Id** in GUI. Returned as "executing_firm_id" in the viewTrades results.
cmta	
compression_trade (C1 only)	Only Y and N values are accepted.
exec_id	Cboe-created execution id.
floor_trader (C1 only)	
frequent_trader_id (C1 only)	Identifies the frequent trader program in which the order is participating, 6 characters or less, ASCII 33-126
occ_id (C1 only)	
open_close	Valid values include the following. O = Open C = Close
order_id	Cboe-created order id.
ors_eligible (C1 only)	Only Y and N values are accepted.
osi_root	
price	
side	Valid values are B and S.
status	Valid values include the following. <empty> = (no filters) all_matched all_related all_unmatched contra_unmatched modified

	pending related_unmatched unmatched unrelated_unmatched
strategy_id (C1 only)	Valid values include the following. <single space> = Unspecified C = Conversion R = Reversal M = Merger S = Short stock interests J = Jelly roll
strike_price	

Example Response

```
{"code":"200",
 "data":[
  {"cmta":"111",   "call_put_flag":"Call",   "executing_firm_id":"CBOE",

"side": "Sell", "clearing_opt_data": "", "revision": 1}],
 "msg":""
}
```

5.5.3 addToQueue

Use this command to submit changes to your trades. The command does not submit revisions to the OCC for reclearing, but adds them to the queue. The request payload of the POST should be two key/value pairs. The keys are `id` and `data`. The values should be in JSON format.

The Cboe `order_id` and `exec_id` are always required in the ids object when submitting an addToQueue command. The `position`, `capacity`, `clearing_firm`, and `qty` values are required to submit an edit for a single trade. The remaining fields must be included as parts of the object; however, each field can be submitted as an empty string with the following exceptions:

- If editing an execution that has already been modified, the item information must be provided. The item can be obtained using the viewTrades command
- `firm_id`, `firm_sub_id`, and `routing_broker` must be provided in the object if editing the `clearing_firm` on a trade

	Description
command	**addToQueue**
ids	JSON-formatted list of objects. Each object must contain `order_id`, `exec_id`, `item`, `firm_id`, `firm_sub_id`, and `routing_broker` keys to identify the order(s) to be modified.
data	JSON-formatted object. The keys for the objects are numbers indexed by zero. The values are objects that contain the following keys. • `position`, `cmta`, `capacity`, `account`, `sub_account`, `clearing_firm`, `clearing_opt_data`, and `qty` • The following are available on C1 only: `cl_order_id`, `frequent_trader_id`, `strategy_id`, `compression_trade`, and `ors_eligible`.

viewTrades to addToQueue Translation Guide

The table below provides a guide to translating between the fields values received for the viewTrades command and the field values that should be sent for addToQueue.

viewTrades	addToQueue
Ids	
order_id	order_id
exec_id	exec_id
Item	Item
firm_id	firm_id
firm_sub_id	firm_sub_id
routing_broker	routing_broker
Data	
Account	account
capacity (value is spelled out)	capacity (value must be a single letter, see “ViewTrades” values above) Any edit of the capacity value of ‘C’ to another value must supply a valid value in the reason_code parameter.
reason_code	Valid values include the following: I = 'Input Error or Error Rpt. (Rule 6.6)' U = 'Unmatched Trade (Rule 6.6)' K = 'Unknown at Ord Entry (Rule 6.6)' M = 'Manual Add (6.6)' O = 'Other, Text Required (Rule 6.6)' A = 'Allocation' N = 'Trade Nullification (Rule 6.5)' J = 'Trade Adjustment (Rule 6.5)' E = 'Error Account (Rule 5.91)' S = 'System Issue'
reason_text	Reason for change of capacity if reason_code parameter is = ‘O’.
cl_order_id	cl_order_id (C1 only)
clearing_opt_data	clearing_opt_data
Cmta	cmta
compression_trade (value is spelled out as “No” or Yes”)	compression_trade (C1 only) value must be a single letter, “N” or “Y”
executing_firm_id	clearing_firm

frequent_trader_id	frequent_trader_id (C1 only)
ors_eligible (value is spelled out as “No” or Yes”)	ors_eligible (C1 only) (value must be a single letter, “N” or “Y”)
position (value is spelled out)	position (value must be O or C)
Size	qty
strategy_id (value is spelled out)	strategy_id (C1 only) (value must be a single letter, see “viewTrades” values above)
sub_account	sub_account

Ids Format:

JSON-formatted list of objects (do not include carriage returns):

```
ids:[
  {
   "order_id": "AAAAAAAAAAAAA",
   "exec_id": "01XX00001",
   "item": "",
   "firm_id": "CBOE",
   "firm_sub_id": "0002",
   "routing_broker": "CBOE"
  }
 ]
```

Data Format:

JSON-formatted list of objects (do not include carriage returns):

```
data:{
  "0": {
    "position": "C",
    "cmta": "111",
    "capacity": "C",
    "account": "AAAA",
    "sub_account": "",
    "clearing_firm": "CBOE",
```

```
    "qty": "10"
   }
 }
```

Example Request (Changing a Single Trade)

```
ids:[
  {
   "order_id": "AAAAAAAAAAAAAA",
   "exec_id": "01XX00001",
   "item": "",
   "firm_id": "CBOE",
   "firm_sub_id": "0002",
   "routing_broker": "CBOE"
  }
 ]
data:{
  "0": {
    "position": "C",
    "cmta": "111",
    "capacity": "C",
    "account": "AAAA",
    "sub_account": "",
    "clearing_firm": "CBOE",
    "clearing_opt_data": ""
   }
 }
```

Example Request (Changing Multiple Trades)

When changing multiple executions, the “data” key must contain a single key. Multiple trades cannot be split with a single command.

```
Ids:[
  {
   "order_id": "AAAAAAAAAAAAA",
   "exec_id": "01XX00001",
   "item": "",
   "firm_id": "CBOE",
   "firm_sub_id": "0002",
   "routing_broker": "CBOE"
  }, {
   "order_id": "BBBBBBBBBBBB",
   "exec_id": "02XX00001",
   "item": "",
   "firm_id": "CBOE",
   "firm_sub_id": "0002",
   "routing_broker": "CBOE"
  }
 ]
data:{
  "0": {
    "position": "C",
    "cmta": "111",
    "capacity": "C",
    "account": "AAAA",
    "sub_account": "",
    "clearing_firm": "CBOE",
    "clearing_opt_data": ""
   }
 }
```

Example Request (Splitting an Execution)

Only one trade may be split at a time, and as a result, you must submit a single identifier in the “id” fields. The number of keys in the data object should match the number of times the trade was split. Data keys should be numbered, beginning with the first key equal to ‘0’, followed by ‘1’, etc.

The value of each key in the data object is a JSON-formatted object that contains all the keys described in the Parameter/Description table. The sum of the qty fields must equal the size of the trade being split. For example, if you are splitting an execution that was for ten contracts into two, five-lot trades, adding the qty fields of the two key/value objects in the data object will equal 10, the original quantity.

It is possible that one of the value objects will be the same as the original trade. For example, if you are splitting a trade for ten contracts into two, five-lot executions, and there are no changes to one of these five-lot trades, one of the two key/value pairs in the data object will have updates, while the other key/value pair will remain unchanged.

```
Ids:[
  {
   "order_id": "AAAAAAAAAAAAAA",
   "exec_id": "01XX00001",
   "item": "",
   "firm_id": "CBOE",
   "firm_sub_id": "0002",
   "routing_broker": "CBOE"
  }
 ]
data:{
  "0": {
    "position": "C",
    "cmta": "111",
    "capacity": "C",
    "account": "AAAA",
    "sub_account": "",
    "clearing_firm": "CBOE",
    "clearing_opt_data": "",
```

```
    "qty": "2"
   }
  },
   "1": {
    "position": "O",
    "cmta": "222",
    "capacity": "U",
    "account": "BBBB",
    "sub_account": "",
    "clearing_firm": "CBOE",
    "clearing_opt_data": "",
    "qty": "8"
   }
  }
```

Example Response

```
{"code":"200",
 "msg":"Execution attribute changes queued"}
```

Reject Messaging

If an addToQueue command fails, the response will be an HTTP 500 status code with text indicating the reason for failure. Possible failure messages can included, but are not limited to the following:

- Invalid capacity type has been selected
- Invalid Broker Id has been selected
- If you have multiple orders to edit you cannot split the orders
- An unknown error occurred
- Could not re-allocate orders because the order sizes did not match

5.5.4 submitToOcc

Use this command to submit all queued trade modifications to the OCC for reclearing.

Parameter	Description
Command	**submitToOcc**

Example Response

```
{"code":"200",
 "msg":"1 out of 1 executions successfully modified by Example User at
FIRM"
}
```

6 US Futures Services

Services available through the US Secure Web API for Cboe Futures Exchange (CFE).

Name	Section	Path	Description
Risk Management	6.1	/account/risk_manager/	Used by CFE TPHs and Clearing Firms to manage the risk of over-execution.
Port Controls	6.2	/account/port_controls/	Used by CFE TPHs and Clearing Firms to manage their ports and default port settings.
Ports Information Service	6.3	/account/ports_info/	Used by CFE TPHs to receive configuration information about their ports.
Block/ECRP Trade Reporting Service	6.4	/account/block_ecrp/	Used by Authorized Reporters (CFE TPH or TPH Related Party) to submit and accept Block and ECRP trades.

6.1 Risk Management Service

Service URL

```
CFE
https://api.batstrading.com/cfe/account/risk_manager/
```

6.1.1 viewExecutingFirms

View available executing firm ID's.

Parameter	Description
Command	**viewExecutingFirms**

Example Response

```
{"msg":"Success",
 "code":"200",
 "data":[{"executingFirmId":"CBOE"}]
}
```

6.1.2 viewRules

View all rules stored for an individual trading date.

Parameter	Description
Command	**viewRules**
Identifier	Executing Firm ID
tradingDay (OPTIONAL)	Pass `today` to view rules for the current trading date. Defaults to next trading date.

Example Response

```
{
    "msg":"",
    "code":"200",
    "data":[
       {"limit_value":500,
        "limit_type":"rate_vol",
        "product_root":"VX",
        "executing_firm_id":"CBOE”},
       {"limit_value":1000,
        "limit_type":"max_size",
        "product_root":"VX",
        "executing_firm_id":"CBOE"}
    ]
   }
```

6.1.3 clearRules

Remove all currently-stored rules. **TPH only.**

Parameter	Description
Command	**clearRules**
Identifier	The Executing Firm ID to clear, or `all` to clear rules for all executing firm IDs.

Example Response

```
{"msg":"","code":"200","data":[]}
```

6.1.4 uploadRules

Expire all existing rules and upload a new rule set for the next trading date.

Parameter	Description
Command	**uploadRules**
Rules	Comma-delimited list of rules to add.

Rule Format:

Colon-separated list of values as follows:

```
executing_firm_id:limit_type:product_root:limit_value:time_limit:
product_type
```

Where a rule should be applied to multiple executing firm IDs, the value passed for the ‘identifier’ parameter should include a pipe-delimited list of identifiers (**clearing firms only**).

Example Request (single EFID)

```
rules=CBOE:rate_vol:VX:1000,CBOE:max_size:VX:10000:time_limt:10,p
roduct_type:option
```

Example Request (multiple EFIDs)

```
rules=CBOE|CTWO|CONE:rate_vol:VX:1000,CBOE|CTWO|CONE:max_size:VX:
10000,time_limit:10,product_type:future
```

Example Response

```
{
  "msg":"Rules updated",
  "code":"200",
  "data":{
          "duplicateCount":0,
          "removeCount":4,
          "processedCount":4,
          "unknownList":[],
          "spacesCount":0,
          "addCount":4}
}
```

6.2 Port Controls Service

Service URL

CFE
https://api.batstrading.com/cfe/account/port_controls/

6.2.1 setClient

Use this command to cancel open orders/quotes or to initiate a kill switch (cancel+block). The allowed combinations of *blockNewOrders* and *cancelOpenOrders* are described in the table below. All other combinations will result in no action (no orders/quotes cancelled and no orders/quotes blocked). The operatorId field must be populated with the Order Entry Operator ID in order to cancel open orders/quotes or to initiate a kill switch.

A block of new orders/quotes will not persist across trading segments/dates. To reverse blockNewOrders='1' within the same trading day, a clearing firm must call the CFE Trade Desk. A trading firm may either call the CFE Trade Desk or send the appropriate risk reset message using BOE/FIX. Unblocking new orders/quotes within the same trading segment/date will not be available via the API.

blockNewOrders	cancelOpenOrders	Result
Not sent	**1**	Open orders/quotes for EFID are cancelled.
0	**1**	Open orders/quotes for EFID are cancelled.
1	**1**	Open orders/quotes for EFID are cancelled; and New orders/quotes are blocked.
1	**0**	No action taken.
1	**Not Sent**	No action taken.

Parameter	Description
Command	**setClient**
product_type	'option', 'future', or 'both' If not specified Futures is default
Clearing	Four character EFID
blockNewOrders	1=block
cancelOpenOrders	1=cancel
operatorId	Identifies the Order Entry Operator responsible for the setClient request. Must be at least 3 characters and no more than 18. Characters in the ASCII range 33-126 are allowed, except for comma, semicolon, and pipe.

manualOrderInd	0=No 1=Yes

**Optional parameters in italics. Note that at least one of the optional parameters must be specified. You may supply one or multiple optional parameters in a single request.*

Example Response

```
{"code":"200", "msg":""}
```

6.3 Ports Information Service

Service URL

```
CFE
https://api.batstrading.com/cfe/account/ports_info/
```

6.3.1 viewPortConnections

Use this command to retrieve CSV formatted data of your ports and their associated connection information. The data will reflect the same information presented in the ‘View Port Connection Info’ available under the More Options link in the Customer Web Portal Ports Dashboard and is subject to change. Each port type will have its own header row and a blank line will be inserted between port types.

Parameter	Description
Command	**viewPortConnections**

Example Response

6.3.2 viewPortAttributes

Use this command to retrieve CSV formatted data of your order handler ports and their associated attribute information. The data will reflect the same information presented in the ‘View Port Attributes Info’ available under the More Options link in the Customer Web Portal Ports Dashboard and is subject to change. Each port type will have its own header row and a blank line will be inserted between port types. The attribute label is given in the leftmost column, with the right-side columns showing the setting for each port (IP Port values given in the header row). The firm name will also be presented in the header row along with the port type.

Parameter	Description
Command	**viewPortAttributes**

6.4 Block/ECRP Trade Reporting Service

Service URL

```
CFE
https://api.batstrading.com/cfe/account/block_ecrp/
```

6.4.1 getProducts

Returns a list of available products (underlying symbols) that can be entered via the Block/ECRP reporting system.

Parameter	Description
Command	**getProducts**
Product_type	Default is “fut” (to trade Futures products). Must send “futo” to trade Options on Futures products.

Example Response

```
{
    "code": "200",
    "msg": "",
    "data": [
        "IBHY",
        "IBHYT",
        "IBIG",
        "IBIGT",
        "VU",
        "VX"
    ]
}
```

6.4.2 getInstrumentsForProduct

Returns a list of available instruments for a given product (underlying symbol). Available products can be viewed with the **getProducts** command.

Parameter	Description
Command	**getInstrumentsForProduct**
product_type	The product to view instruments for. Valid products can be viewed with the **getProducts** command.

Example Response

```
{
    "code": "200",
    "msg": "",
    "data": [
        {
"instrumentId": "000020",
            "instrumentName": "V1MC/X3",
            "instrumentExpiration": "Nov 15 2023"
        },
        {
            "instrumentId": "000011",
            "instrumentName": "VX",
            "instrumentExpiration": "Oct 12, 2021"
        },
        {
            "instrumentId": "000002",
            "instrumentName": "VX17/J5",
            "instrumentExpiration": "Apr 14, 2055"
        }
    ]
}
```

6.4.3 getReporterInfo

Returns available reporter information for the requesting user. Available information includes accounts and operator ids (OEOIDs) from the requesting users firm as well as executing firm ids (EFIDs).

Parameter	Description
Command	**getReporterInfo**

Example Response

```
{
    "code": "200",
    "msg": "",
    "data": {
        "accounts": [
            "1111"
        ],
        "efids": [
            "CBOE"
        ],
        "oeoids": [
            "1111"
        ]
    }
}
```

6.4.4 getPendingTrades

Given a Reference ID from an entered Block/ECRP report, returns pending trades. This includes both sent and received pending trades. This response includes a **token** on each trade which must be used when sending the **submitContra** command (below) to identify which trade you are accepting/rejecting.

Parameter	Description
Command	**getPendingTrades**
referenceId	The referenceId obtained from the original reporter. This is returned to the submitter either on the website GUI (if they submitted via the GUI) or from the **submitTrade** command below.

Example Response

```
{
    "code": "200",
    "msg": "",
    "data": {
        "sent": [
            {
                "tradeDescription": "VX/J5 - Apr 21, 2055 - Block",

6.4.6 submitTrade

Submits a new Block/ECRP report. Returns a Reference ID which should be copied and distributed to all contra parties so that they may accept or reject the trade. Note that while trades can be modified after submission via the web GUI they cannot be modified ("replaced") using the API.

Parameter	Required	Description
Command		**submitTrade**
related_position	*	The related position information, e.g., **VX Buy 100 2021-10-12 100 Call 100 12 Delta** Follow the format: instrument_or_underlying side size expiry strike call_put price delta Delta Only applies when trade_type is **ecrp.**
product-1	Yes	The product (underlying symbol) of this leg. Valid values can be viewed with the **getProducts** command.
instrument-1	Yes	The instrument (symbol id) of this leg. Valid values can be viewed with the **getInstrumentsForProduct** command.
size-1	Yes	The size of this leg.
price-1	Yes	The price of this leg.
side-1	Yes	The side of this leg. Valid values are [**Buy**, **Sell**]
blockTradeComplexType-1	Yes	The trade type of this leg Valid values are [**Complex**, **Simple**, **Strip**]
product-2	*	Format for adding an additional leg. Up to four legs total may be specified on any given trade report.
instrument-2	*	
size-2	*	
price-2	*	
side-2	*	
blockTradeComplexType-2	*	
trade_time	Yes	The time the trade took place (central time; e.g. 11:20:00).
arrangement_time	Yes	The time the trade was arranged (central time; e.g. 11:20:00).
reportingPartyEfid	Yes	The executing firm id of the reporting party (e.g. CBOE).
reportingPartyAccount	Yes	The Account of the reporting party.
sub_account	No	The Clearing Account of the reporting party.
