BATS Exchange (BYX/BZX) TCP FAST PITCH Technical Specification Update

As noted on Friday, September 3rd, 2010, BATS will be implementing various changes to both its order entry and proprietary data feed specifications in support of the upcoming changes to Regulation SHO. Among those changes, it was noted that **Members using TCP FAST PITCH must use FAST PITCH decoder v1.3 or later** to support new Trading Status Messages. It must be implemented no later than Saturday, October 23, 2010 and as the decoder is backwards compatible it may be implemented at any time prior to the effective date.

Please be advised that it has been brought to our attention that **the referenced link to the FAST PITCH decoder v1.3 was not updated**. This message is to confirm that the zip file has been replaced with v1.3 files and is now available for download at http://www.batstrading.com/resources/membership/batsfastpitch.zip. Note, you can confirm the version of the decoder you download by inspecting the headers of the files extracted from the zip for version information.

Please contact the BATS Trade Desk or your Director of Sales with any questions.
