

Reminder - Sunset of Legacy Mass Cancel Method

Reference ID: C2020081200

Overview

Applicable Cboe Exchanges: BZX Options, Cboe Options, C2 Options, EDGX Options

Effective October 12, 2020, Cboe will sunset the legacy *MassCancel* (FIX Tag 7693) and *MassCancelLockout* (FIX Tag 7697) instructions currently supported in FIX and BOE protocols on the BZX Options ("BZX"), Cboe Options ("C1"), C2 Options ("C2"), and EDGX ("EDGX") Options Exchanges.

Technical Details

Upon the effective date, Cboe will only accept the currently available *MassCancelInst* (7700) instruction on *Cancel Order* and *Purge Orders* message types sent over FIX, BOE, or Purge Ports. The *MassCancelInst* field should be specified; optionally, the EFID in the BOE *ClearingFirm* or FIX *OnBehalfOfCompID* (115) field, one or more *CustomGroupIDs* (7699), and the Risk Root in the *Symbol* (55) field. A Mass Cancel ID can also be specified in the *MassCancelID* (7695) field if the Acknowledgement Style is set to "S" or "B". Upon the effective date, any value entered for *MassCancelLockout* will be ignored.

Testing Opportunities

Cboe is currently rejecting the legacy *MassCancel* instruction in all options certification environments.

Additional Information

For additional information refer to the following technical specifications.
