

Cboe Europe Equities Announces Multiple Trading Identifier Support on Sponsored Access Ports

Applicable Cboe Exchanges: BXE, CXE, DXE

Overview

Effective **Monday 31st August 2026**, Cboe Europe will allow multiple Trading Identifiers (bank codes) from the same Sponsoring Participant to be configured on a single Sponsored Access port. Currently, Sponsored Clients are required to use separate logical ports for different bank codes under the same Sponsoring Participant.

Where multiple of the same Sponsoring Participant bank codes are enabled, the Sponsored Client must provide a valid ClearingFirm (FIX Tag 439) value otherwise the order will be rejected.

Bank codes from different Sponsoring Participants cannot be enabled on the same logical port. Existing configured risk limits will remain unimpacted.

Testing Opportunities

This functionality is available immediately in the certification environment across all venues.

Additional Information

Port configuration changes should be submitted via the Participant portal. Accessed directly for Production [here](#) and Certification [here](#).
