Update - Cboe Europe Equities Maximum Permitted Notional Value per Exchange Trade Report Increase

Applicable Cboe Exchanges : BXE, CXE, DXE

Overview

Cboe Europe currently imposes a maximum value of €50m per cleared Exchange Trade Report (ETR). Cboe Europe is pleased to inform Participants that, effective **Friday 5th June 2026**, the maximum allowable value will increase to €100m per cleared ETR. This notice provides an update to our previous communication regarding the implementation of this change.

Cboe Europe Risk Port Controls

We wish to clarify that any limits currently set by Participants within the Cboe Europe Risk Port Controls tool will not be automatically updated to €100m upon the effective date. Existing limits will remain unchanged.

Participants and General Clearing Members who wish to impose a limit lower than €100m should update the "Max notional per trade report" values within the Permitted Markets section of the Risk Port Controls, as described in the Risk Management Specification and Web Portal Risk Controls Specification.

Please note that the Participant Manuals for both UK and NL venues have already been updated (as of 13th May 2026) to anticipate the above change.

Testing

The above changes will be available for testing in the BXE, CXE and DXE Certification environments, effective **Monday 1st June 2026**.

Additional Information

Please contact the Cboe Europe Trade Desk or your Account Manager with any questions.
